AI NOTES SERIES

AI Prompt Shortcuts for Students

50 copy-and-paste prompts for ChatGPT, Claude, Gemini, Google Flow and other AI tools - for summarising, studying, pictures, videos, websites and everyday school work.

By Shah Fahad

AI & Technology Innovator and Educator - Buner, Khyber Pakhtunkhwa, Pakistan

November 2026

These are practical study notes, written in simple English for students and teachers. Every shortcut in this set is a ready-made prompt: copy it, replace the words inside [square brackets] with your own topic, and paste it into any AI tool. The prompts are starting points for learning - the thinking, checking and final writing stay with you.

How to Use These Shortcuts

An AI tool only knows what you tell it. A short, clear request - called a **prompt** - gets a short, clear answer. Every shortcut in this set is built the same way, so once you learn the pattern, you can write your own prompts for anything.

> **The golden formula:** Role + Task + Details + Format + Level.
> Example: *You are my tutor (role). Explain fractions (task) for a Class 8 student (level) using a pizza example (details), in short bullet points (format).*

Three steps, every time

- **Step 1 - Copy** the shortcut exactly as written.
- **Step 2 - Replace** every word inside [square brackets] with your own subject, class, topic or text.
- **Step 3 - Paste** it into ChatGPT, Claude, Gemini or any other AI chat, then read the answer carefully and check it against your book.

What is inside

- **Prompts 1-10:** Study and Summarising
- **Prompts 11-18:** Writing, English and Languages
- **Prompts 19-26:** Exam Prep and Practice
- **Prompts 27-34:** Pictures and Images
- **Prompts 35-40:** Video (Google Flow and similar tools)
- **Prompts 41-46:** Websites
- **Prompts 47-50:** Everyday Student Helpers

Which AI Tool for Which Job

Different AI tools are built for different jobs. Use this table to pick the right one - then use the same shortcut prompt in whichever tool you choose.

Job	Good tools to try	Why students use them
Study help, summaries, questions	ChatGPT, Claude, Gemini, Muse	All-round chat AI tools that explain, summarise and quiz you in simple words.
Long text and careful writing	Claude	Handles long pasted chapters well and writes in a clear, natural style.
Quick answers with sources	Perplexity, Gemini	Search-based answers that can show where the information came from - still check the sources.
Pictures and posters	Gemini, ChatGPT Images, Ideogram, Canva AI	Make illustrations, diagrams, colouring pages and thumbnails from words.
Short videos	Google Flow	Turns a written scene, or a still picture, into a short moving clip.
Websites and code	Claude, ChatGPT, Gemini, Muse	Write, explain and fix simple website code step by step.

Most of these tools have a free version that is enough for school work. Tool names and features change often - if one tool is not available to you, the same prompt usually works in another one.

Five habits of students who get the best answers

- **Give your class and level.** "For a Class 7 student" stops answers that are too hard or too easy.
- **Give the actual text.** Pasting your paragraph or chapter always beats naming it from memory.
- **Ask for a format.** Bullets, a table, 5 lines, 10 questions - say exactly what shape you want.
- **Ask a follow-up.** "Explain point 3 again with an example" is a complete and powerful prompt.
- **Say what not to do.** "Do not give me the final answer - give me hints" keeps the learning with you.

> **One-line test:** before you press send, read your prompt once. If a classmate could not guess what answer you want, the AI cannot guess it either - add the missing detail.

Study and Summarising

Prompts 1-10 - turn long lessons into short, clear study material.

1. Summarise a chapter in five lines

Best for: ChatGPT, Claude, Gemini

> Summarise this chapter in exactly 5 short lines. Use simple English for a Class [8] student. Here is the text: [paste your text]

Tip: Works with any chapter. Change the number of lines to make it longer or shorter.

2. Explain it like I am 12 years old

Best for: ChatGPT, Gemini, Claude

> Explain [photosynthesis] in very simple words, like you are teaching a 12-year-old. Use one daily-life example and no difficult words.

Tip: The best shortcut when a book line feels too hard. Ask for an example from farming, home or cricket.

3. Turn my notes into clean bullet points

Best for: Claude, ChatGPT, Gemini

> Turn these rough notes into clean headings and bullet points. Keep every important fact, remove repeated lines: [paste your notes]

Tip: Claude is strong with long pasted text. Always read the result once against your original notes.

4. Make a one-page revision sheet

Best for: ChatGPT, Claude, Gemini

> Make a one-page revision sheet from this topic: [topic]. Include: 5 key facts, 5 important words with meanings, and 3 questions I should be able to answer.

Tip: Print it or copy it into your notebook the night before a test.

5. Summarise a long article or PDF text

Best for: Claude, ChatGPT, Gemini

> I will paste a long text. First give me the main idea in 2 lines, then 5 key points, then any dates, names or numbers I must remember. Text: [paste text]

Tip: If the text is very long, paste it in two or three parts and say: Wait, more is coming.

Study and Summarising (continued)

6. Explain a difficult word with examples

Best for: ChatGPT, Gemini, Claude

> Explain the meaning of the word [evaporation]. Give: 1) a simple meaning, 2) a meaning in Urdu, 3) two example sentences, 4) one picture I can imagine in my mind.

Tip: Use it for science and English words. The mind-picture makes the word easy to remember.

7. Compare two topics in a table

Best for: ChatGPT, Claude, Gemini

> Compare [mitosis] and [meiosis] in a simple table. Use these columns: Point, [Topic 1], [Topic 2]. Keep each box to one short line. Maximum 6 rows.

Tip: Tables are the fastest way to learn differences - a favourite exam question style.

8. Turn a lesson into a short story

Best for: ChatGPT, Gemini, Claude

> Turn this lesson into a short, interesting story of about 150 words for a school student. Keep all the main facts correct. Lesson: [paste or name the topic]

Tip: Stories stick in memory. After reading, close the story and try to retell the facts yourself.

9. Quiz me - do not tell the answers yet

Best for: ChatGPT, Claude, Gemini

> Ask me 5 questions about [the water cycle], one by one. Wait for my answer each time. Tell me if I am right, and only give the correct answer after I try.

Tip: This is studying, not cheating - you do the thinking, AI only checks you.

10. Find the main idea and keywords

Best for: ChatGPT, Claude, Gemini

> Read this paragraph and give me: 1) the main idea in one line, 2) five keywords with short meanings, 3) one line I can write in an exam. Paragraph: [paste paragraph]

Tip: Use it paragraph by paragraph when a whole chapter feels too big.

Writing, English and Languages

Prompts 11-18 - improve your writing and practise English every day.

11. Correct my English and explain my mistakes

Best for: ChatGPT, Claude, Gemini

> Correct my English paragraph. First give the corrected version, then list each mistake and explain it in simple words. My paragraph: [paste your writing]

Tip: Do not just copy the corrected version - read the mistakes list, that is where the learning is.

12. Make my sentence simple and clear

Best for: ChatGPT, Gemini, Claude

> Rewrite this in simple, clear English that a Class [7] student can understand. Keep the meaning the same: [paste sentence or paragraph]

Tip: Add: Give me two versions - very simple, and a little better English - to learn both levels.

13. Write a model paragraph I can learn from

Best for: ChatGPT, Claude, Gemini

> Write a model paragraph of 100 words on [My Village] for a Class [8] student. Use simple, correct English with 5 useful words highlighted in bold.

Tip: Study the model, then close it and write your own paragraph on the same topic.

14. Vocabulary builder - 10 words a day

Best for: ChatGPT, Gemini, Claude

> Give me 10 useful English words about [school life]. For each word give: meaning in simple English, meaning in Urdu, and one example sentence.

Tip: Write the words in a notebook and make your own sentence for each one.

Writing, English and Languages (continued)

15. Translate it - and teach me how

Best for: Gemini, ChatGPT, Claude

> Translate this into [Urdu / English]: [paste text]. Then explain 3 difficult words from it and show me how the sentence is built.

Tip: Translation plus explanation teaches you the language; translation alone teaches nothing.

16. Letter and application format helper

Best for: ChatGPT, Claude, Gemini

> Show me the correct format of an application to [the Head Teacher] for [two days leave], with a sample. Then leave blank spaces where I will write my own details.

Tip: Always write your real details yourself. Never put your CNIC number or home address into an AI chat.

17. Essay outline builder

Best for: ChatGPT, Claude, Gemini

> Make an outline for an essay on [Science in Our Daily Life]: an introduction idea, 4 main points with one line each, and a conclusion idea. Do not write the full essay - I will write it myself.

Tip: An outline keeps your essay in order and still leaves the writing - and the marks - to you.

18. Daily English speaking partner

Best for: ChatGPT, Gemini, Claude

> Be my English speaking partner. Start a simple conversation about [my school day]. Ask me one short question at a time, and gently correct my mistakes after each answer.

Tip: Ten minutes a day with this prompt improves speaking faster than memorising grammar rules.

Exam Prep and Practice

Prompts 19-26 - practise like it is the real exam, before the real exam.

19. Make 10 MCQs with an answer key

Best for: ChatGPT, Claude, Gemini

> Make 10 multiple-choice questions from [Chapter 3: Fractions]. Each question has 4 options. Put all the correct answers in an answer key at the very end, separate from the questions.

Tip: Try all 10 first, then check the key. Note the ones you missed and revise only those.

20. Make a full practice test

Best for: ChatGPT, Claude, Gemini

> Make a practice test for Class [9] [Biology] on [Cell Structure]: 5 short questions, 3 long questions and 5 MCQs. Total marks 40. Give the marking scheme separately at the end.

Tip: Sit with a clock, write on paper, and mark yourself honestly with the scheme.

21. Flashcards maker

Best for: ChatGPT, Claude, Gemini

> Turn this topic into 12 flashcards. Write each one as: Front: [a question or word] / Back: [the short answer]. Topic: [the solar system]

Tip: Copy them onto small cards or a notebook page and test yourself while travelling or waiting.

22. Solve it step by step - and teach me

Best for: ChatGPT, Gemini, Claude

> Solve this problem step by step and explain the reason for each step in simple words. At the end, give me one similar problem to try myself. Problem: [paste problem]

Tip: Never copy a solution you do not understand. The extra practice problem is the real test.

Exam Prep and Practice (continued)

23. Predict important exam questions

Best for: ChatGPT, Claude, Gemini

> From this chapter, list the 8 most likely exam questions and tell me why each one is important. Chapter: [paste chapter text or topic list]

Tip: AI cannot see your real paper - treat this as a smart guess and still revise the whole chapter.

24. Make my 7-day study timetable

Best for: ChatGPT, Claude, Gemini

> Make a 7-day study timetable. My school ends at [2 pm], I can study [3] hours a day, and my weak subjects are [Maths and English]. My test starts on [date]. Keep one free evening.

Tip: A timetable only works if it fits your real life - tell the AI your real free hours.

25. Check my answer and give me marks

Best for: ChatGPT, Claude, Gemini

> Here is an exam question and my answer. Give me marks out of [10], tell me what is good, what is missing, and show one line I could add to improve it. Question: [paste] My answer: [paste]

Tip: This is one of the best study uses of AI - it is feedback, and feedback is how marks grow.

26. Last-day quick revision quiz

Best for: ChatGPT, Gemini, Claude

> My exam on [History] is tomorrow. Ask me 15 very short questions covering the whole syllabus, one by one, and keep a score. At the end, list the topics I got wrong so I can revise them tonight.

Tip: Use it the evening before - then sleep early. A fresh mind scores more than a tired one.

Pictures and Images

Prompts 27-34 - for ChatGPT Images, Gemini, Microsoft Designer, Ideogram and similar picture tools. A good picture prompt = Subject + Action + Place + Style + Details + Size.

27. Classroom poster picture

Best for: Gemini, ChatGPT Images, Ideogram

> A bright classroom poster illustration of [the water cycle], flat vector style, clear labels with empty space for text, green mountains and blue rain, cheerful colours, portrait size, no words inside the picture

Tip: Ask for no words - AI tools often spell picture-words wrongly. Add your own title text later.

28. Science diagram picture

Best for: Gemini, ChatGPT Images

> A clean educational diagram-style illustration of [parts of a flower], white background, each part shown clearly and separately, soft colours, simple school textbook style, landscape size

Tip: Use it to understand and to copy into your notebook by hand - drawing it yourself fixes it in memory.

29. Story picture for children

Best for: ChatGPT Images, Gemini, Google Flow (Whisk)

> A cute storybook picture: [a small goat] crossing [a wooden bridge over a river] at sunrise, soft watercolour style, gentle and friendly, no scary things, square size

Tip: Make one picture per story scene, using the same style words every time so the pictures match.

30. Colouring page for young students

Best for: ChatGPT Images, Gemini, Ideogram

> A black-and-white colouring page for children: [a smiling apple tree with birds], thick clean outlines only, no shading, no grey, lots of white space, A4 portrait

Tip: Perfect for primary classes - print it and let students colour it in their own way.

Pictures and Images (continued)

31. Infographic-style picture

Best for: Ideogram, Gemini, ChatGPT Images

> An infographic-style illustration about [saving water at home], 5 clear sections with simple icons - a tap, a bucket, a plant, a toothbrush, a rain cloud - flat style, blue and green colours, portrait size, very little text

Tip: Infographics explain a full topic in one picture - good for school notice boards and projects.

32. Edit my photo with words

Best for: Gemini, ChatGPT Images

> Edit this photo: change the background to [a school library], keep the person and clothes exactly the same, keep the face natural and unchanged, bright daylight

Tip: Only edit your own photos or photos you have permission to use. Never change someone else's photo without asking them.

33. Thumbnail for a video or presentation

Best for: Ideogram, ChatGPT Images, Canva AI

> A bold thumbnail picture: [a teacher pointing at a glowing light bulb], bright colours, strong contrast, big empty space on the left side for a title, landscape 16:9 size

Tip: Keep the empty space - a thumbnail with room for a big title gets more clicks and looks cleaner.

34. Same character in many pictures

Best for: Google Flow (Whisk), Gemini, ChatGPT Images

> Keep this exact same character in every picture: [a young boy with black hair, green school uniform and a red bag]. New scene: [he is planting a small tree in a school garden], same storybook style, same colours

Tip: Repeat the character description word-for-word in every prompt - that is the secret of matching pictures.

Video

Prompts 35-40 - for Google Flow, and other text-to-video and image-to-video tools. A good video prompt = Subject + Action + Place + Camera move + Mood + Length.

35. Short lesson video from a topic

Best for: Google Flow, other video AI tools

> A 8-second educational video: [raindrops fall on green fields, clouds gather, then sunshine breaks through], slow and clear, bright colours, calm school-lesson style, landscape 16:9

Tip: Start with one simple scene per video. Join small clips together instead of asking for one long film.

36. Animate a still picture (image-to-video)

Best for: Google Flow, other video AI tools

> Animate this picture: [the river water flows gently, the tree leaves move in a soft wind, one bird flies across the sky], slow natural movement, keep everything else exactly the same

Tip: Upload your picture first, then use this prompt. Small movements look real; big movements often break the picture.

37. Story video in four scenes

Best for: Google Flow, other video AI tools

> Scene 1 of 4: [a young student opens an old book in a small village library, golden light from the window, dust shining in the air], cinematic, slow camera push-in, warm mood. Keep the same student and style for all 4 scenes.

Tip: Write all 4 scene prompts before you generate, changing only the action - the story then looks like one film.

Video (continued)

38. Title intro video for a class or channel

Best for: Google Flow, other video AI tools

> A 5-second title intro video: [glowing blue particles join together to form a book shape on a dark background, then burst into light], modern, clean, space left in the middle for a title, no text in the video

Tip: Add your title later in a video editor - text made by video AI is often misspelled.

39. Science process video

Best for: Google Flow, other video AI tools

> An educational animation-style video: [a seed under the soil drinks water, a small root grows down, a green shoot rises up into sunlight], clear steps, bright colours, slow movement so students can follow

Tip: Ask for slow movement and clear steps - fast videos teach nothing.

40. Camera words - the add-on list

Best for: Google Flow, other video AI tools

> Add one of these to the end of any video prompt: slow zoom in / camera moves left to right / top view looking down / close-up on the hands / camera circles slowly around the subject / still camera, only the subject moves

Tip: One camera move per clip. Two moves in one prompt usually gives a shaky, confused video.

Websites

Prompts 41-46 - for ChatGPT, Claude, Gemini, Muse and other coding helpers. Always test the result and read what it built.

41. Build a simple one-page website

Best for: Claude, ChatGPT, Gemini

> Build a simple one-page website for [my school / my tuition class]. Sections: a big title, About, [Classes / Subjects], Contact. Use [blue and white] colours, big clear text, and make it work on a mobile phone. Give me the full code in one file.

Tip: Ask for one file first - it is the easiest kind of website to save, share and put online.

42. Make a quiz web page

Best for: Claude, ChatGPT, Gemini

> Make an interactive quiz web page with 10 questions about [Class 6 Science]. Show one question at a time, tell me right or wrong after each answer, and show my final score with a Play Again button.

Tip: Change the questions yourself before sharing it - you are the teacher of your own quiz.

43. Make a timetable or notice page

Best for: ChatGPT, Claude, Gemini

> Make a clean web page showing this school timetable: [paste your timetable]. Use a clear table, one colour per subject, big text that is easy to read on a phone screen.

Tip: The same prompt works for a results page, a duty chart or a class notice board.

Websites (continued)

44. Improve my website design

Best for: Claude, ChatGPT, Gemini

> Here is my website code: [paste code]. Make it look more modern and professional: better colours, more space, clearer headings, nicer buttons. Do not change my text or remove any section.

Tip: Saying what NOT to change is as important as saying what to change.

45. Write the words for my website

Best for: ChatGPT, Claude, Gemini

> Write simple website text for [a primary school in a small village]: a welcome line, a short About paragraph of 4 lines, and one line for each of these sections: Teachers, Classes, Admissions, Contact. Friendly and easy English.

Tip: Read every line before you publish it - the website carries your name, so the words must be true.

46. Fix my code error

Best for: Claude, ChatGPT, Gemini

> My web page is not working. This error appears: [paste the error]. Here is my code: [paste code]. Explain the mistake in simple words first, then give me the fixed code and tell me exactly which lines changed.

Tip: Asking which lines changed teaches you coding - and stops a small fix from breaking something else.

Everyday Student Helpers

Prompts 47-50 - small daily jobs, done in seconds.

47. Notice and announcement writer

Best for: ChatGPT, Gemini, Claude

> Write a short school notice: [the school will remain closed on Friday because of a teachers training day]. Keep it formal, under 60 words, with a heading, the main information, and the date [write today's date].

Tip: Check names, dates and days yourself before the notice goes anywhere - AI can mix up dates.

48. Viva and interview practice partner

Best for: ChatGPT, Claude, Gemini

> Practise a viva with me on [Pakistan Studies]. Ask me one question at a time like a strict but kind examiner. After each answer, tell me: correct, half correct, or wrong - and give the one line I should have said.

Tip: Examiner-style practice removes fear. By the real viva, the questions feel like old friends.

Everyday Student Helpers (continued)

49. Subject and career choice guide

Best for: ChatGPT, Claude, Gemini

> I am in Class [10]. I like [biology and computers] and my marks are good in [science]. Suggest 4 study and career paths for me in Pakistan, with: what to study next, what job it leads to, and one honest difficulty of each path.

Tip: Use it as a starting map, then talk to your teachers and family - big life choices need real people too.

50. The master prompt - my personal tutor

Best for: ChatGPT, Claude, Gemini

> You are my personal tutor. I am a Class [8] student in Pakistan. Teach me [fractions] from the very beginning: explain one small part at a time, give an example, then ask me one question before moving on. Use simple English, and Urdu explanation where a word is difficult. Do not give me homework answers - teach me how to solve them.

Tip: Save this one. Changing only the class and topic turns it into a tutor for every subject you study.

Use AI Honestly - and Stay Safe

These shortcuts are powerful because they make learning faster. Used the wrong way, they make learning disappear. Keep these five rules and AI will stay your helper, not your replacement.

1. Learn first, copy never. Use AI to understand, practise and get feedback. Write your homework, essays and exam answers in your own words - that is what your teacher is marking, and what your future self needs.

2. Always check the facts. AI tools sometimes give a wrong answer with full confidence. Check names, dates, numbers and formulas against your textbook or teacher.

3. Protect your personal information. Never type your password, CNIC number, home address, phone number, or photos of other people into an AI chat.

4. Respect other people's work and photos. Only edit photos you own or have permission to use, and do not present AI-made work as entirely your own where your school asks for your own work.

5. Tell your teacher when required. If your school or exam rules say AI help must be declared, declare it. Honesty is part of the lesson.

Your practice task

Pick any topic from your current chapter. Run Prompt 2 (Explain it like I am 12), then Prompt 9 (Quiz me - do not tell the answers yet), then Prompt 21 (Flashcards maker). In about twenty minutes you will have understood the topic, tested yourself on it, and made revision cards from it - that is the real shortcut: a better method, not a shorter effort.

> **Remember:** the best prompt is the honest one. Ask AI to teach you, test you and check you - never to hide you.
