Book Cover and Thumbnail

Two copy-and-paste prompts that design a clean book cover or a bright video thumbnail - with the right size, a clear title space, and colours a reader can spot from far away.

Notes by Shah Fahad

Free student notes - Pictures set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Copy a prompt on page 2 into any AI image tool, fill in your title and topic, and get cover and thumbnail designs you can finish in Canva or CapCut.

The copy-and-paste prompts

1 - Book cover

Best in: Gemini - ChatGPT - Muse image tools

> Design a book cover for a book titled [TITLE] by [AUTHOR NAME].
> Topic: [TOPIC]. Readers: [AUDIENCE, e.g. Class 5 students / young readers].
> Style: [STYLE, e.g. bright flat illustration / realistic photo style / simple and clean].
> Main picture: [ONE CLEAR SUBJECT, e.g. a young plant growing towards the sun].
> Colours: [2-3 COLOURS]. Mood: [cheerful / serious / exciting].
> Rules: portrait shape for a printed book cover, one main picture only, lots of empty space at the top for the title, no small details, no watermark, and do NOT write any words on the image - leave the title space blank.

Fill the brackets: one main picture works best. A cover with five small things on it looks crowded and nobody can read it from a shelf or a phone screen.

2 - Video thumbnail

Best in: Gemini - ChatGPT - Google Flow frames

> Design a YouTube thumbnail, wide 16:9 shape, 1280 x 720.
> Video topic: [TOPIC]. Main picture: [ONE BIG SUBJECT, close up, in the centre or on the right side].
> Expression or action: [e.g. surprised face / hands doing an experiment / a solved sum on a board].
> Background: [simple, one strong colour, high contrast]. Leave the left side mostly empty for 3-4 big title words.
> Rules: bright, sharp and easy to understand in one second, no small text, no watermark, and do NOT write any words on the image.

Why no words in the image: AI image tools often spell title words wrong. Generate the picture clean, then add your real title in Canva or CapCut - the spelling will always be correct.

How to use it, step by step

1. **Write your title and topic first** on paper - a clear title makes a clear cover.
2. **Copy one prompt above**, fill every bracket, and add: "Give me 4 different versions". Pick the clearest one.
3. **Add your real title text** in Canva or CapCut - big, bold, high contrast, 3-5 words for a thumbnail.
4. **Do the small-size test.** Shrink the design on your phone. If you can still understand it at stamp size, it will work.
5. **Save the right size:** thumbnail 1280 x 720, square post 1080 x 1080, story cover 1080 x 1920.

Worked example

You type: "Design a book cover for *Science Made Easy* by Shah Fahad. Topic: Class 5 science notes, for primary students. Style: bright flat illustration. Main picture: a young green plant growing towards a warm sun, with a magnifying glass beside it. Colours: deep green, yellow and white. Mood: cheerful. Portrait shape, one main picture, empty space at the top for the title, no words on the image."

You get: a bright portrait cover with the plant and sun in the middle and clean empty sky at the top. In Canva you type "Science Made Easy" in big bold letters in that space and add your name at the bottom - ready to print or post.

Change it for other jobs

For this job	Change this
YouTube thumbnail	Use prompt 2, wide 16:9, one big subject, title space on the left.
TikTok, reel or Instagram	Portrait 1080 x 1920 for TikTok and reels, square 1080 x 1080 for Instagram - subject in the centre.
School book or notes cover	Add: "simple, respectful, suitable for a school".
No people in the design	Add: "no faces and no people - use objects, nature or shapes only".

Design only for your own work. Make covers for your own book, notes, channel or project. Do not copy a famous cover or a big channel's thumbnail so closely that people confuse yours with theirs, and never use someone else's name, logo or photo without permission.

Print needs quality. For a printed cover, ask for the largest size the tool can make, and print one test copy on paper before printing many.
