Free student notes - November 2026

For: Students in Class 9 to university who must choose subjects, a field of study, or a first career direction. **Works with:** ChatGPT, Claude, Gemini, Muse and other chat AI tools. **Time:** 5 minutes to use, 30 days to follow the starter plan.

A career choice is a decision, not a guess

Most students choose a career in one of three rushed ways: copying a friend, following family pressure without asking questions, or picking the most famous job they know. Then they spend years studying for work they may not enjoy - or work their subjects do not even lead to.

This shortcut slows that decision down and makes it personal. It asks AI to act as a career guide who first learns about you - your class, your favourite subjects, your marks, what you enjoy doing, and where you hope to work - and only then suggests careers, with the study path and the honest difficulty of each one.

> **Remember:** There is rarely only one right career. Most subjects open several good paths. Your job is not to find a perfect answer in one day - it is to compare real options clearly, then take the first small step towards the best fit.

What this prompt makes AI do

- **Start from you** - your subjects, marks, interests and limits come first, not a generic list of jobs.
- **Suggest 3 to 5 fitting careers** - close enough to compare, different enough to give you a real choice.
- **Explain the daily work** - what a person in that career actually does all day, in simple words.
- **Show the study path** - the subjects, degree or course, and roughly how long the road takes.
- **Name one honest difficulty** - tough entry tests, long study, high cost or strong competition, stated plainly.
- **End with action** - a 30-day starter plan and questions that make the guidance better.

Best for these moments

Situation	Example question
Choosing subjects after matric	Pre-Medical, Pre-Engineering, Computer Science or Arts - which fits me?
Liking a subject, unsure of jobs	I love Biology - what careers use it besides doctor?
Average marks, big confusion	My marks are about 65 percent - which paths are still open to me?
Planning skills early	What should I learn this year for a future in computers or teaching?

The copy-and-paste prompt

Copy the box below exactly. Replace everything in **[square brackets]** with your own facts, and paste it into any chat AI.

The Master Prompt ChatGPT - Claude - Gemini - Muse

> Act as a friendly career guide for a student in Pakistan. My class is [CLASS], my favourite subjects are [SUBJECTS], my marks are about [MARKS], things I enjoy doing are [INTERESTS], and I hope to work in [CITY / ANYWHERE / ONLINE - or write "not sure"]. Suggest 3 to 5 careers that fit me. First put them in a simple table. Then, for each career, tell me in simple words: 1) what the daily work is, 2) which subjects and degree or course I need, 3) skills I should start learning now, 4) about how long the path takes, and 5) one honest difficulty. At the end, give me a 30-day starter plan with one small task per week, and ask me 3 questions that will help you guide me better. Do not promise me a job or a salary.

Tip: Honest facts get honest guidance. If your marks are average, write average - AI can still show you diploma and skill-based paths a perfect-marks list would hide.

Three useful variations

1. Compare Two Careers

> Compare [CAREER A] and [CAREER B] for a student in Pakistan with my subjects: [SUBJECTS] and marks about [MARKS]. Compare daily work, study path and length, entry difficulty, skills needed, and where the work is found. End by saying which career fits which type of student - do not decide for me.

Use when: You are stuck between two options, for example doctor or teacher.

2. Which Subjects Should I Choose?

> I am moving into [NEXT CLASS - for example Class 11]. My favourite subjects are [SUBJECTS], my marks are about [MARKS], and I am interested in [FIELD OR "not sure"]. Which subject combination should I choose, and why? Show which careers each combination keeps open and which doors it closes.

Use when: A subject choice is near - this is the cheapest moment to protect your future options.

3. My 30-Day Starter Plan

> My goal career is [CAREER]. I am in [CLASS] and I can give [HOURS] hours per week. Make me a 30-day starter plan: one free task per week - a skill to practise, a person to talk to, something to read or watch, and one small proof of my work.

Use when: You have chosen a direction and want to test it before spending money or years.

See it in action - one subject, several paths

A Class 10 student writes: favourite subject Biology, marks about 75 percent, enjoys helping people. Many students in her place see only one road. A good guide answer opens the map:

Career	Daily work	Study path and one honest difficulty
Doctor	Examining patients, finding the illness, guiding treatment.	FSc Pre-Medical, entry test, long medical degree. Difficulty: entry is highly competitive.
Medical lab technologist	Testing blood and other samples so doctors can decide treatment.	FSc, then a degree or diploma in lab technology. Difficulty: exact work - small mistakes matter.
Biology teacher	Explaining topics in class, preparing lessons, checking work.	FSc, then a BS in science and teacher training. Difficulty: patience and clear speaking, daily.
Pharmacist	Preparing medicines and guiding their safe use.	FSc Pre-Medical, then a pharmacy degree. Difficulty: strong Chemistry needed.

Same favourite subject - four different daily lives. Fit depends on the work, not fame.

> **Ask one more question:** "What can I do this month to test if I really enjoy this work?"

Use AI honestly

AI gives a starting map, not the final decision. Talk to your teachers, your family, and if possible one person who actually does the job.

Verify the facts that change. Entry tests, merit, fees and dates change yearly - check the official board or university website. Never pay anyone promising a seat or job, and never paste your name or roll number into a prompt.

Try it now - 3 quick tasks

1. Fill in the Master Prompt with your real facts, and save the answer.
2. Pick your two best-fit careers and run the Compare Two Careers variation.
3. Start Week 1 of your 30-day plan today - one small task done beats a perfect plan never started.
