Check My Answer

One copy-and-paste prompt that makes any AI chat check your own answer like a teacher - what is correct, what is missing, what is wrong, and how to write it better in your own words.

Free student notes - Study & Summarising set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Write your answer first, then copy the prompt on page 2 into ChatGPT, Claude, Gemini, Muse or any other AI chat, paste your question and your answer under it, and get honest marking in seconds.

The copy-and-paste prompt

Check My Answer Works in: ChatGPT - Claude - Gemini - Muse

> Act as my teacher and check my answer. Follow these rules strictly:
> Question: [PASTE THE QUESTION HERE]
> My answer: [PASTE YOUR OWN ANSWER HERE]
> Class / level: [YOUR CLASS, for example Class 8]
> Total marks for this question: [MARKS, for example 5]
> 1. Give me a fair mark out of the total, and say in one line why.
> 2. List what is CORRECT in my answer.
> 3. List what is MISSING - the important points a full-mark answer needs.
> 4. List what is WRONG, and give the correct fact for each mistake.
> 5. Point out any spelling, grammar or wording problems.
> 6. Then show me an improved version of MY answer - keep my ideas and my simple words, just fix the mistakes and add the missing points.
> 7. End with one tip: the single thing I should practise so this mistake does not happen again.
> Do not be too kind and do not be too strict - mark me like a real exam marker.

Fill the brackets: paste the exact exam or textbook question, then your answer exactly as you wrote it - mistakes and all. If you clean it up first, the AI cannot find the mistakes you need to fix.

How to use it, step by step

1. **Write your answer first, without any help.** Use your book closed, like in the exam. This first try is the learning.
2. **Paste the prompt, the question and your answer** into any AI chat and press send.
3. **Read the three lists carefully:** correct, missing and wrong. The missing list is usually where the lost marks are hiding.
4. **Compare the improved version with yours.** Notice what changed - a missing keyword, a wrong fact, a clearer sentence.
5. **Rewrite the answer yourself** in your notebook, in your own words. Do not copy the AI version word for word.
6. **Check again tomorrow.** Answer the same question from memory and re-check it - if the mark rises, the learning has stuck.

> **Why writing first matters:** if the AI writes the answer and you only read it, nothing is tested. Writing first shows you exactly what you know and what you only think you know - and that gap is what revision should fix.

What it looks like in practice

Question (5 marks): What is photosynthesis? A Class 8 student wrote this answer and pasted it in:

Student answer: Photosynthesis is the process in which green plants make their food. Plants take sunlight and water and make food and oxygen.

AI mark: 3 out of 5. The main idea is correct, but two important points are missing and one fact needs fixing.

Correct: Plants make their own food; sunlight and water are needed; oxygen is produced.

Missing: Carbon dioxide from the air, and chlorophyll - the green substance in leaves that traps sunlight.

Improved version: Photosynthesis is the process by which green plants make their food. Using chlorophyll, plants take in carbon dioxide and water, and with sunlight they make glucose and release oxygen.

One tip: For every science definition, check: what goes in, what comes out, and where it happens.

Change the check for different work

Add one of these short lines under the main prompt to fit the work you are checking:

Add this line	What changes
This is a maths answer - check every step, not only the final answer, and show me the first step where I went wrong.	Finds the exact step that lost the marks, instead of just saying wrong.
These are MCQ answers - just tell me which numbers are wrong and explain only those.	Fast checking for a full page of multiple-choice practice.
Be strict like a board exam marker - do not give marks for vague or half-correct points.	Final revision before the real exam, when honest marking matters most.

Use it honestly. This shortcut checks work you have already done. If you ask the AI to write the answer first and then pretend it was yours, the mark means nothing - and in the exam hall there is no AI to help you.

Check the AI too. AI marking can occasionally be wrong. If a correction surprises you, check that point in your textbook first - your book is the final authority for your exam.
