Classroom Poster Image

One copy-and-paste prompt that turns any AI image tool into a classroom poster maker - big title, clear pictures, few words, and colours a child can read from the back of the class.

Free student notes - Pictures & Images set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Copy the prompt on page 2 into ChatGPT, Gemini, Claude, Muse, Canva AI or any other AI image tool, fill in your topic, and your poster is ready to check and print.

The copy-and-paste prompts

1. Master poster prompt

Works in: ChatGPT - Gemini - Canva AI - Ideogram

> Create a classroom wall poster for primary school children.
> Topic: [TOPIC]
> Class level: [CLASS, for example Class 5]
> Title at the top, in very large bold letters, spelled exactly like this: "[TITLE]"
> Show only these labels, spelled exactly like this: [LABEL 1], [LABEL 2], [LABEL 3], [LABEL 4]
> Style: flat, friendly illustration, simple shapes, no photograph, no busy background.
> Colours: bright but soft - blue, green and yellow - with dark text on a light background so it is easy to read from far away.
> Layout: one big central picture, lots of empty space, nothing crowded, no small text, no extra words, no logo, no watermark.
> Shape: vertical poster (portrait), high resolution, ready to print on A3 paper.

Fill the brackets: keep the label list short - 3 to 5 labels is enough for one poster. Long word lists are where AI image tools make the most spelling mistakes.

2. Safer prompt - picture only, add words yourself

Best when: spelling must be perfect

> Create the picture only for a classroom poster about [TOPIC] for [CLASS]. Flat, friendly illustration, one big central picture, bright soft colours, light background, lots of empty space at the top and around the labels. Add NO text, NO letters and NO words anywhere in the image.

Then: open the picture in Canva, PowerPoint or Word and type the title and labels yourself. Your spelling will be perfect every time, and you can use a big, clear font.

How to make and print it

1. **Choose prompt 1 or 2.** Use prompt 1 for a quick poster. Use prompt 2 for exam topics, Urdu words, or any poster that will stay on the wall all term.
2. **Generate 2 or 3 versions.** Pick the clearest picture - not the prettiest one. Simple wins in a classroom.
3. **Check every word and every arrow.** Read each label letter by letter and check the diagram against your textbook.
4. **Fix one thing at a time.** Type a short follow-up such as "Keep everything the same, only make the title bigger" instead of starting again.
5. **Print large.** A3 is best for a wall poster, A4 for a notebook or classroom door. Leave a white border so nothing is cut off.

Worked example - The Water Cycle, Class 5

Filled in, the master prompt looks like this:

> Create a classroom wall poster for primary school children. Topic: the water cycle. Class level: Class 5. Title at the top, in very large bold letters, spelled exactly like this: "THE WATER CYCLE". Show only these labels, spelled exactly like this: "Evaporation", "Condensation", "Rain", "Collection". Style: flat, friendly illustration - sun, sea, green hills, one cloud and rain, with curved arrows showing the cycle. Colours: bright but soft - blue, green and yellow - with dark text on a light background. Layout: one big central picture, lots of empty space, no small text, no extra words, no logo. Shape: vertical poster (portrait), high resolution, ready to print on A3 paper.

Check in the result: the sun heats the sea (evaporation), vapour rises and forms the cloud (condensation), rain falls (precipitation - here labelled "Rain" for young children), and water collects back in the sea. If an arrow points the wrong way, ask for that one fix or use the picture-only prompt and draw the arrows in yourself.

Change it for any subject

Poster you want	Change these parts
English - word classes	Topic: parts of speech. Labels: Noun, Verb, Adjective, Adverb. Add: "Give one small picture example for each word."
Maths - times tables	Topic: 7 times table. Use the picture-only prompt - numbers must be exact, so type the table yourself.
Science - parts of a plant	Topic: parts of a plant. Labels: Flower, Leaf, Stem, Roots. Add: "One plant only, side view."
Classroom rules	Topic: classroom rules. Labels: Listen, Raise Your Hand, Be Kind, Keep Tidy. Add: "Show happy children following each rule."
Urdu or Pashto poster	Always use the picture-only prompt, then type the Urdu or Pashto words yourself in a proper font. AI image tools spell Urdu script wrong most often.

Check before you hang it. AI image tools often misspell words, add extra letters, or draw a diagram that looks right but is wrong. Read every word letter by letter and check the science or maths against your textbook - your book is the final authority.

Keep it readable. If a child at the back cannot read the title, the poster is decoration, not teaching. Fewer words, bigger letters and stronger contrast fix almost every weak poster.
