Google Flow Lesson Video

Turn any lesson topic into a short teaching video: first plan the scenes with an AI chat, then paste one clear prompt per scene into Google Flow and join the clips in order.

Notes by Shah Fahad

Free student notes - Video set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Page 2 gives you two prompts - one to plan the video, one to paste into Google Flow for each scene. No filming, no camera and no editing experience needed.

Step 1 - Plan the video with an AI chat

Lesson Video Planner

Works in: ChatGPT - Claude - Gemini - Muse

> Turn my lesson topic [TOPIC] for [CLASS] into a plan for a short teaching video of about 1 minute. Give me:
> 1. A list of 5 short scenes, in teaching order - what the student should SEE in each scene.
> 2. One simple spoken line for each scene (the voiceover line), in easy English.
> 3. For each scene, one ready-to-paste Google Flow prompt describing: the subject, the action, the place, the camera movement, and the style "bright, clear, educational, suitable for school students".
> 4. Keep every scene simple - one idea per scene. No difficult words. No text or words inside the video picture.

Fill the brackets: replace [TOPIC] with your lesson, for example "the water cycle" or "addition with carrying", and [CLASS] with your class, for example "Class 5".

Step 2 - The prompt to paste into Google Flow

One Scene in Google Flow

Tool: Google Flow - Text to Video

> [SUBJECT] [DOING ONE CLEAR ACTION] in [PLACE], [TIME / LIGHT]. Camera: [slow push-in / gentle pan / still shot]. Style: bright, clean and clear educational video for school students, natural colours, smooth slow movement. No text, no words, no logos in the picture.

Example, filled in: "A glass of water on a school desk slowly forming small drops on its outside in a bright classroom, morning light. Camera: slow push-in. Style: bright, clean and clear educational video for school students, natural colours, smooth slow movement. No text, no words, no logos in the picture."

> **The golden rule of Flow:** one scene, one idea, one prompt. A short clip can show evaporation OR rain - not the whole water cycle at once. Make 4 to 6 short clips and join them in order; that joined set is your lesson video.

How to build the video, step by step

1. **Run the planner prompt** in any AI chat. Check the 5 scenes teach the lesson in the right order.
2. **Open Google Flow** and choose Text to Video. Paste the scene 1 prompt and generate.
3. **Watch before you accept.** If the action is wrong or the picture is confusing, change one word in the prompt and generate again.
4. **Repeat for every scene.** Keep the same style words in every prompt so all clips look like one video.
5. **Join the clips in order** using Flow's scene tools or any simple video editor on your phone.
6. **Add the voice.** Read the voiceover lines from your plan aloud and record them, or type them into a free text-to-speech tool, and lay the voice over the clips.
7. **Add titles on top, not inside.** Put the topic name and key words as captions in your editor - AI video is poor at spelling words inside the picture.

Make it fit your class

Change this	What you get
End the Flow prompt with "vertical video, tall frame for a phone screen"	A phone-size video for WhatsApp and class groups.
Keep the same character words in every scene prompt	The same teacher, animal or object appears across the whole lesson.
Ask the planner for Urdu voiceover lines	The same video, explained in Urdu for younger students.
Add "simple flat animation style, like a school textbook picture"	A gentle cartoon look that suits primary classes.
Ask the planner for only 3 scenes and 30 seconds	A quick starter video to open the lesson, not replace it.

Check every fact before you show it. AI video can look beautiful and still show a process the wrong way round. Watch the full video once yourself and check it against your textbook - your book is the final authority for your class and your exam.

Credits and access: Google Flow needs a Google account and uses credits, and its availability and limits can change. Plan all your scenes first (Step 1 costs nothing) so no credit is wasted on trial and error.

More shortcuts in this set: Four-Scene Story Video - Image to Video - Science Experiment Video - Urdu Voiceover Video - and many more free notes on the website.
