Infographic Image

One copy-and-paste prompt that turns any topic into a single poster-style picture - clear sections, simple icons, and very little text that anyone can understand at a glance.

Notes by Shah Fahad

Free student notes - November 2026

For: Students making school projects, class presentations and notice-board posters. **Works best with:** Ideogram, Gemini and ChatGPT Images. **Time:** 5 minutes to make, 2 minutes to check and fix.

One picture that explains a whole topic

An infographic is a picture that teaches. Instead of a long paragraph, it shows the main points of a topic in small clear sections, each with a simple icon and two or three words. A reader understands it in seconds - which is why teachers pin infographics on notice boards and students use them on the first page of a project.

Image AI can make these posters for you, but only if your prompt describes the structure. If you write only "make an infographic about water", you get a crowded picture with messy, misspelled words. If you name the sections, the icons, the colours and the size, you get a clean poster you can actually use.

> **The golden rule:** Very little text. Image AI still makes spelling mistakes in long sentences. Keep the title short, keep each label to 2 to 4 words, and let the icons do most of the talking.

The 5 parts of a good infographic

- **A short title** - 2 to 5 words at the top, in big clear letters.
- **4 to 6 sections** - one idea per section, in a clear order.
- **One simple icon per section** - a tap, a leaf, a book, a clock.
- **Only 2 or 3 colours** - matching colours look clean and print well.
- **The right shape** - portrait for posters and notice boards, landscape for slides.

Topics that work beautifully

Topic type	Example
Good habits and awareness	Saving water, keeping clean, road safety, healthy food
Step-by-step processes	The water cycle, how a plant grows, recycling steps
Science summaries	Parts of a plant, types of energy, the solar system
Comparisons	Then and now, city and village, summer and winter

The copy-and-paste prompt

Copy the box below. Replace **[TOPIC]** and the sections in brackets with your own, paste it into an image AI, and check the result word by word.

The Master Prompt

Ideogram - Gemini - ChatGPT Images

> An infographic-style illustration about [TOPIC], with [5] clear sections. Section icons: [icon 1], [icon 2], [icon 3], [icon 4], [icon 5]. Title at the top: "[SHORT TITLE]". Each section has a label of 2 to 3 words only. Flat style, [blue and green] colours, clean white background, portrait size, very little text, no long sentences.

Tip: Ideogram is usually the best of the three for correct spelling in pictures. Whichever tool you use, zoom in and read every single word before you print or share the poster.

Three useful variations

1. Steps or Timeline

> An infographic showing the steps of [PROCESS] in order, numbered 1 to [5]. One simple icon and a 2-word label for each step, connected by arrows. Flat style, [two colours], portrait size, very little text.

Use when: Your topic happens in order - the water cycle, a plant growing, how to recycle, the story of a historical event.

2. Compare Two Sides

> A comparison infographic: [THING A] on the left, [THING B] on the right, divided down the middle. 4 matching points on each side, one simple icon per point, labels of 2 to 3 words. Flat style, one colour family per side, portrait size, very little text.

Use when: The lesson is a contrast - renewable and non-renewable energy, healthy and junk food, city life and village life.

3. No Text - Add Your Own Words

> An infographic-style illustration about [TOPIC] with [5] clear sections and simple icons, flat style, [colours], portrait size. No text, no letters, no words anywhere - leave empty space above each section for labels.

Use when: Spelling must be perfect - for an exam project or a printed poster. Add the labels yourself afterwards in any photo editor or by hand. This is the safest variation of all.

Worked example - Saving Water at Home

Here is the Master Prompt filled in for a Class 5 awareness poster - the same topic as the cover picture of this note.

> An infographic-style illustration about saving water at home, 5 clear sections with simple icons - a tap, a bucket, a plant, a toothbrush, a rain cloud - flat style, blue and green colours, portrait size, very little text.

The five sections teach one habit each: close the tap, use a bucket, water plants wisely, turn off the tap while brushing, and collect rain water. Naming each section in the prompt is what makes the picture organised instead of random.

Check and fix before you use it

- **Read every word out loud.** One wrong letter on a notice board teaches the wrong spelling to the whole class.
- **Count the sections.** If you asked for 5 and got 4 or 7, say so in a follow-up: "Remake it with exactly 5 sections."
- **Check the icons match.** A wrong icon confuses the message. Follow up with: "Change the third icon to a plant, keep everything else the same."
- **Check the facts.** If the poster shows numbers or facts, compare them with your textbook before printing.

> **Printing tip:** Ask for portrait size for notice boards and classroom walls, and landscape size for presentation slides. Download the largest size the tool offers, so the print stays sharp.

Use AI honestly

Your work, AI's drawing hand. Choosing the topic, the sections and the correct facts is your learning. Do not present an AI poster as hand-drawn work if your teacher asked for drawing.

No personal photos. Infographics need icons, not faces. Never put anyone's photo into an awareness poster without permission.

Try it now - 3 quick tasks

1. Make the Saving Water poster above, then remake it with the No Text variation and add your own labels.
2. Use the Steps variation for the water cycle with 4 steps.
3. Use the Compare variation for healthy food and junk food, 4 points on each side.
