AI PROMPT SHORTCUTS FOR STUDENTS

Last-Day Revision Plan

Your exam is tomorrow. You do not need more notes - you need a plan. This one prompt turns your subject, your chapters and the hours you actually have into an hour-by-hour revision timetable, ranked by what is most likely to earn marks.

Copy, fill and paste this prompt

Works in ChatGPT, Claude, Gemini, Muse and any other AI chat. Replace everything in [brackets], then paste your chapter list or upload your notes if the tool allows files.

```
Act as my exam coach. My exam is tomorrow.

Subject: [e.g. Biology, Class 10]
Exam time: [e.g. 9:00 am tomorrow]
Hours I can study today: [e.g. 6 hours]
Chapters in the exam: [paste the chapter list]
Chapters I am weakest in: [name 2-3, or write "not sure"]
Marks pattern, if I know it: [e.g. mostly short questions from Chapters 3 and 5]

Make me a realistic hour-by-hour revision plan for today that:
1. Ranks the chapters by likely marks and by my weak areas, and studies the highest-value chapters first.
2. Uses 50-minute study blocks with 10-minute breaks - no block longer than 50 minutes.
3. In every block, tells me exactly what to do: read, make a one-page summary, solve past questions, or recall from memory.
4. Puts active recall and past-paper questions in at least half of the blocks - not only reading.
5. Leaves the last block for a quick self-test on the whole syllabus.
6. Ends studying at least 1 hour before I sleep, and tells me when to stop and sleep.
7. Gives me a 30-minute morning plan for tomorrow before the exam.

Show the plan as a table with three columns: Time | Chapter / Topic | What to do.
Keep it achievable. If the chapters do not fit in my hours, say so honestly and drop the lowest-value chapters - do not squeeze everything in.
```

Tip: if you have your textbook PDF or class notes, attach them and add one line: "Use only the attached notes for the chapter content."

Why this plan works

Marks first, not page numbers. On the last day, an hour on a high-weight chapter you half-know earns more than an hour perfecting a chapter worth two marks. The prompt forces the AI to rank before it schedules.

Recall beats re-reading. Closing the book and writing what you remember - or answering past questions - fixes material in memory far better than reading the same page three times. That is why half the blocks are recall and questions.

Sleep is part of the plan. Memory is consolidated during sleep. A plan that ends at 2 a.m. usually costs more marks the next morning than the extra chapter earns, so the prompt builds in a stop time.

A filled example

Student fills in: Biology, Class 10. Exam 9 a.m. tomorrow. 5 hours today. Chapters: Cell Structure, Life Processes, Control and Coordination, Heredity, Our Environment. Weakest: Heredity. Pattern: Life Processes carries the most long questions.

The AI returns a table like this (shortened):

Time	Chapter / Topic	What to do
4:00 - 4:50 pm	Life Processes	Read the diagram-heavy pages, then draw and label the heart and nephron from memory. Check and fix.
5:00 - 5:50 pm	Life Processes	Solve 6 past-paper questions. Mark them. Note every mistake on one page.
6:00 - 6:50 pm	Heredity (weak area)	Learn the cross diagrams step by step, then reproduce two crosses without looking.
7:30 - 8:20 pm	Cell Structure + Control and Coordination	One-page summary of each, from memory first, book second.
8:30 - 9:20 pm	Our Environment + full self-test	Quick pass on food chains, then 15 mixed questions covering all five chapters. Stop at 9:30 pm.

Morning plan in the example: 7:30-8:00 a.m. - read only the mistakes page and the diagrams, nothing new.

Three time budgets, one prompt

Only 3 hours left

Change the hours line to 3 and add: "Cover only the top 3 chapters. Skip the rest completely and tell me which ones you skipped."

One full evening (5-6 hours)

Use the prompt exactly as written. This is the budget it was designed for.

A full day (8+ hours)

Add: "Add a second recall round in the afternoon that re-tests everything from the morning, and one full timed past paper in the middle of the day."

Check the plan before you follow it

- **The times add up.** Add the blocks. If the AI promised 8 hours of work in your 5 hours, send it back: "The blocks add up to more than my available time. Cut the lowest-value work."
- **Every chapter name is real.** AI tools sometimes invent a chapter or mix in another class's syllabus. Compare the plan against your own chapter list.
- **The first block is the most valuable one.** If the plan starts with your easiest, lowest-mark chapter, ask: "Reorder this so the highest-value chapter comes first, while I am freshest."
- **Breaks and sleep are still there.** A plan with no breaks is a plan you will abandon by the third block.

Your blank timetable

Copy this grid into your notebook and fill it from the AI's answer. Writing it by hand once helps you remember the order of the day.

Time	Chapter / Topic	What to do - and done?

Tick each block as you finish it. A block half-done and ticked honestly teaches you more than a perfect plan you only read.

Follow-up prompts that sharpen the plan

1. **"Quiz me now."** - "From the plan, quiz me on [chapter] with 10 questions, one at a time. Do not give the answer until I reply."
2. **"My plan is slipping."** - "I lost one hour. Rebuild the rest of today's plan from now, keeping only the highest-value work."
3. **"Make my mistakes page."** - "Turn everything I got wrong in this chat into one short revision page I can read tomorrow morning."
4. **"Explain the one thing I still do not get."** - "Explain [topic] in simple words with one everyday example, then ask me one question to check I understood."

Night-before checklist

- Stop studying at the time in your plan - and actually stop.
- Read only your mistakes page and diagrams in the morning. Learn nothing new.
- Pack your admit card / roll number slip, pens and ID the night before.
- Set two alarms. Keep your phone away from the bed.
- Sleep at least 6-7 hours. A rested brain recalls more than a tired one that read one extra chapter.
- Eat a normal breakfast. Do not experiment with anything new on exam morning.

Common mistakes this prompt prevents

- **Starting from Chapter 1** just because it is first - instead of starting where the marks are.
- **Reading all day, testing never** - the plan forces questions and recall into half the blocks.
- **Trying to finish everything** - the prompt makes the AI drop low-value chapters openly instead of pretending they fit.
- **Studying all night** - the stop time and sleep rule are written into the request, not left to willpower.
