Likely Exam Questions

One copy-and-paste prompt that reads your chapter and predicts the questions most likely to appear in your exam - ranked, tagged by type and marks, with a clear plan for what to revise first.

Notes by Shah Fahad

Free student notes - Exam Prep set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Copy the prompt on page 2 into ChatGPT, Claude, Gemini, Muse or any other AI chat, paste your chapter, and get a focused list of likely questions instead of revising everything blindly.

The copy-and-paste prompt

Likely Exam Questions Works in: ChatGPT - Claude - Gemini - Muse

> You are an experienced exam setter for [BOARD / CLASS], for example BISE or Class 9. I will paste a chapter below. Predict the most likely exam questions from it. Follow these rules strictly:
> 1. Give me 15 likely questions in total, ranked from most likely to least likely.
> 2. For every question, write its type - MCQ, short question or long question - and its likely marks.
> 3. Mark each question High, Medium or Low likelihood, and add one short line explaining why it is likely - for example, a key definition, a repeated concept, a diagram or a comparison.
> 4. Group the list into three parts: Must Prepare, Important, and Good to Know.
> 5. After the list, give me a 3-day preparation plan that covers the Must Prepare questions first.
> 6. Finish with the 5 most important definitions, dates, formulas or terms from this chapter that I must memorise.
> Do not write the answers yet. I will ask for answers one question at a time after I have tried them myself.
> Here is my chapter: [PASTE CHAPTER TEXT OR PHOTOS OF THE PAGES HERE]

Fill the brackets: replace [BOARD / CLASS] with your board and class, for example "BISE Swat, Class 9 Biology", and paste the full chapter text - the more of the chapter you give, the better the prediction.

How to use it well

1. **Paste the whole chapter.** A title alone gives a weak guess. Paste the text, or clear photos of every page, so the AI can see the definitions, diagrams and exercises.
2. **Start with Must Prepare.** Work through the High likelihood questions first - they carry the most marks for the least time.
3. **Try each question yourself first.** Write your answer from memory, then ask the AI to check it. Reading a ready-made answer is not revision.
4. **Cross-check with past papers.** Open the last 3 to 5 years of your board papers. A predicted question that also appeared before deserves double time.
5. **Listen to your teacher.** Topics your teacher repeated, wrote on the board or marked as important in class outrank any AI list.
6. **Revise, then widen.** Once the top questions are solid, move to Important and Good to Know so nothing in the chapter is a complete surprise.

> **Why ranking matters:** before an exam, time is short and the chapter is long. A ranked list lets you spend your first hours where the marks are, instead of starting at page one and running out of time at the most important topic.

What it looks like in practice

Chapter: Photosynthesis, Class 9 Biology. Part of the list you will get:

Must Prepare - 1. Define photosynthesis and write its balanced chemical equation. *Short question, 3 marks - High.* Why: it is the central definition of the chapter and appears in almost every paper.

Must Prepare - 2. Draw and label the internal structure of a leaf and explain how it is suited to photosynthesis. *Long question, 5 marks - High.* Why: a labelled diagram question is a board favourite here.

Important - 3. Compare light-dependent and light-independent reactions in a table. *Short question, 4 marks - Medium.* Why: comparison tables are a common way examiners test two ideas at once.

Good to Know - 4. Which factor does NOT affect the rate of photosynthesis? A) Light intensity B) Carbon dioxide C) Soil colour D) Temperature. *MCQ, 1 mark - Medium.* Why: the factors are often tested as a quick MCQ.

Make it fit your exam

Add one of these short lines under the main prompt to change the focus:

Add this line	What changes
Focus only on long questions worth 5 marks or more.	For final revision, to secure the big-mark answers.
Give me only MCQs - 25 of them, with no answers yet.	Quick objective practice for entry tests and board MCQ sections.
Base the prediction on the last 5 years of my board papers, pasted below.	The AI weighs repeated past-paper topics more heavily - the strongest prediction you can get.
Explain in simple Urdu why each question is likely, but keep the questions in English.	Helps you understand the reasoning while practising in exam language.
Now give me a model answer for question 1 only, in exam style.	Use after you have tried the question yourself - one model answer at a time.

Predictions are a guide, not a guarantee. No AI has seen your actual paper. A student who prepares only the predicted questions is gambling - always cover the full chapter at least once, and use this list to decide the order, not to skip topics.

Check the AI too. AI can invent a topic that is not in your syllabus or miss one that is. Compare the list against your textbook and board syllabus before you trust it - they are the final authority.
