Logo and Sticker Maker

Two copy-and-paste prompts that turn any AI image tool into a simple designer - one for a clean logo for a club, channel or project, and one for a fun sticker for notebooks, laptops and folders.

Free student notes - Pictures set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Copy a prompt on page 2 into ChatGPT, Gemini, Claude, Muse or any other AI image tool, fill in your name, symbol and colours, and your first design appears.

The copy-and-paste prompts

Prompt 1 - Simple Logo

Works in: ChatGPT - Gemini - Claude - Muse

> Design a simple, clean logo for [NAME - for example: Science Club, my YouTube channel, our class project].
> Symbol: [ONE simple symbol - for example: an open book, a rocket, a leaf, a mountain].
> Style: flat vector style, bold shapes, no gradients, no photo, no 3D.
> Colours: only [2 COLOURS - for example: teal and yellow] on a plain white background.
> Text: write the name exactly as "[NAME]" in clear, bold, easy-to-read letters, spelled correctly. If text is difficult, make the logo with the symbol only and no text.
> Shape: [circle / square / badge shape]. Make 4 different options so I can choose.
> The logo must look clear even when it is very small, like on a notebook or a profile picture.

Fill the brackets: one symbol only. A book plus a rocket plus a star together becomes a mess - the best logos use a single idea.

Prompt 2 - Die-Cut Sticker

Works in: ChatGPT - Gemini - Claude - Muse

> Make a single die-cut sticker of [SUBJECT - for example: a smiling pencil, a happy book, a small rocket].
> Style: cute cartoon sticker style, thick white border around the shape, bold outlines, bright flat colours.
> Background: plain white, so the sticker is easy to cut out.
> Text: [no text / add this exact word: "WORD" in bold rounded letters].
> Make it cheerful and clear, with no extra objects around it. Make 4 different options.

Die-cut means the sticker is cut in the shape of the picture itself, with a white edge - the style you see on laptops and water bottles.

Always ask for 4 options. AI design is a numbers game: the first result is rarely the best. Generate a set, choose the strongest shape, then ask the AI to improve only that one.

Step by step: from idea to finished file

1. **Decide the job first.** Logo for identity - a club, channel or team - or sticker for fun and decoration. Do not mix both jobs in one prompt.
2. **Pick one symbol and two colours.** Write them down before you prompt. Simple shapes survive small sizes; thin lines and many colours disappear.
3. **Paste the prompt and generate 4 options.** Look at shape first, colour second, details last.
4. **Choose one and improve it.** Say: "Keep option 2 exactly the same, but make the lines thicker and the colours brighter." Change one thing at a time.
5. **Check the spelling letter by letter.** If a word is wrong, regenerate - or choose the symbol-only version and add the name later in Canva or any editor, where spelling is fully in your control.
6. **Save big.** Download the largest size offered. A big file can be made smaller later; a small file can never be made sharp again.

Worked example 1: a science club logo

Filled-in prompt

> Design a simple, clean logo for our school Science Club. Symbol: a round flask with one bubble rising. Style: flat vector style, bold shapes, no gradients. Colours: only teal and yellow on a plain white background. Text: symbol only, no text. Shape: circle badge. Make 4 different options. The logo must look clear even when very small.

Why symbol-only here: the club name goes under the logo on posters and banners, typed properly - so the AI spelling problem never appears at all.

Worked example 2: a notebook sticker

Filled-in prompt

> Make a single die-cut sticker of a smiling open book wearing small round glasses. Style: cute cartoon sticker style, thick white border, bold outlines, bright flat colours. Background: plain white. Text: no text. Make it cheerful and clear, with no extra objects. Make 4 different options.

Print tip: print one copy on normal paper first and check the size in your hand before printing a full sheet on sticker paper.

Change the design with one extra line

Add one of these short lines under either prompt:

Add this line	What changes
Make it in a circle badge shape with a ring around it.	Best shape for profile pictures and stamps.
Use only black and white, no colour.	Prints cheaply and photocopies cleanly.
Make the background transparent.	The design can sit on any colour - on a video, slide or website. Not every tool can do this; if it cannot, ask for a plain white background and remove it in an editor.
Make a matching set of 6 stickers on one sheet, same style.	A full sticker sheet for a notebook or a class reward chart.
Make it look hand-drawn, like a pencil sketch filled with colour.	A friendly classroom feel instead of a company feel.
Show the same logo in my two colours and also in one colour only.	You get a version for colour printing and one for black-and-white printing.

Before you print or publish - the 5-point check

1. **Spelling:** read every letter in the image out loud. One wrong letter means regenerate.
2. **Small-size test:** zoom out until the design is the size of a coin. If you cannot tell what it is, simplify it.
3. **Edges:** for stickers, is the white border complete and even all the way round?
4. **Background:** is it truly plain, with no shadows, tables or extra objects creeping in?
5. **Originality:** does it look like your own idea - not a copy of a famous brand, team or cartoon character?

Do not copy famous logos. Asking for a design "like" a big brand, a football club or a cartoon character can produce a near-copy. Use those only as private inspiration; publish and print only designs that are your own.

AI text is unreliable. Image tools still misspell names, swap letters and invent extra strokes - especially in Urdu script. For any design where the words matter most, use the symbol-only version and add the words yourself in an editor.
