Make My Design Better

Two copy-and-paste prompts that turn any AI tool into a friendly design teacher - one that reviews your poster, slide or page and lists exactly what to fix, and one that remakes it cleaner while keeping your own words.

Notes by Shah Fahad

Free student notes - Pictures set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Upload a photo or screenshot of your design, copy a prompt from page 2 into ChatGPT, Gemini, Claude or Muse, and get clear, simple fixes you can apply yourself.

The copy-and-paste prompts

Prompt 1 - Design Review

Works in: ChatGPT - Gemini - Claude - Muse

> I am uploading my design - it is a [WHAT IT IS - for example: school poster, presentation slide, social media post, classroom chart]. It will be used [WHERE - for example: printed on A4, shown on a screen, seen from far away in a corridor].
> Please review it like a kind design teacher and tell me:
> 1. What is working well - name 2 things I should keep.
> 2. What is hard to read or confusing - name the exact place on the design.
> 3. Colours: are they easy on the eyes? Suggest a better set of only 2 or 3 colours if needed.
> 4. Layout: what should move, get bigger, get smaller, or be removed?
> 5. Give me a final fix list of 5 changes, in order - the most important first.
> Do not change my words or my facts. Only judge the design.

Fill the brackets: always say where the design will be seen. A poster read from 3 metres away needs much bigger letters than a page read in the hand.

Prompt 2 - Remake It Better

Works in: ChatGPT - Gemini - Claude - Muse

> Recreate this design in a cleaner, better version.
> Keep ALL my words exactly the same, spelled exactly as I wrote them. Keep all facts, numbers and names the same.
> Improve only the design: one clear big heading at the top, tidy alignment, even spacing, only [2 or 3] colours - [YOUR COLOURS], and one simple main picture.
> Make the most important line the biggest. Leave empty space around the edges - do not fill every corner.
> Style: [flat and simple / bright and cheerful for children / neat and formal for school office work].
> Make 2 versions so I can choose.

Important: after the remake, compare every word with your original, letter by letter. AI image tools often change spelling while they tidy the layout.

Review first, remake second. Prompt 1 teaches you what good design means, so each time you need the AI less. Use Prompt 2 when you are in a hurry - but still read its result carefully.

Step by step: from messy to clear

1. **Save a copy of your original.** Never work on your only copy - you will want to compare before and after, and sometimes the original was better.
2. **Upload a clear picture.** A straight screenshot or a straight photo in good light. If the AI cannot see the design properly, its advice will be guesswork.
3. **Run Prompt 1 and read the fix list.** Note the top 3 fixes. You do not have to accept every suggestion - you know your audience best.
4. **Fix one thing at a time.** In your app (Canva, PowerPoint, Word or any editor), apply the first fix, look again, then the next. Changing everything at once hides what actually helped.
5. **Or run Prompt 2 for a remake.** Then check the remake word by word against your original before you use it.
6. **Do the distance test.** Print it, pin it up, step back 3 metres. If the heading cannot be read from there, it is still too small or too pale.

Worked example 1: a crowded school poster

Filled-in prompt

> I am uploading my design - it is a poster for our school Science Day. It will be printed on A3 and pinned in the corridor, seen from far away. Please review it like a kind design teacher: 2 things to keep, what is hard to read, a better set of only 3 colours, what to move or remove, and a final fix list of 5 changes, most important first. Do not change my words or facts.

Typical fixes you will get: one heading instead of four, date and place much bigger, remove the extra clip-art pictures, and dark letters on a light background instead of yellow on white.

Worked example 2: a dull slide

Filled-in prompt

> Recreate this presentation slide in a cleaner, better version. Keep ALL my words exactly the same, spelled exactly as I wrote them. Improve only the design: one clear big heading, tidy alignment, even spacing, only 3 colours - navy, teal and white - and one simple picture of the water cycle on the right. Make the heading the biggest text. Leave empty space around the edges. Style: flat and simple. Make 2 versions.

Slide rule: if a slide needs tiny letters to fit everything, it has too many words - split it into two slides instead of shrinking the text.

Fix one problem with one extra line

Add one of these short lines under either prompt:

Add this line	What changes
Suggest only colour changes - keep the layout exactly as it is.	For a design that is tidy but looks dull or clashes.
Suggest only layout changes - keep my colours and fonts.	For a crowded or unbalanced design.
Make it readable for young children in Class 1 to 5.	Bigger letters, simpler words placement, brighter colours, fewer items.
Make it look formal, for an office or official notice.	Calm colours, straight alignment, no cartoons or decoration.
Check it for printing in black and white only.	Shows whether the design still works on a school photocopier.
Explain each fix in one simple sentence - I am a beginner.	Advice you can actually follow, with no design jargon.

Before you use the new design - the 5-point check

1. **Words:** compare every word, name and number with your original. One changed digit in a date or phone number ruins the poster.
2. **Heading:** is there ONE main heading, clearly the biggest thing on the page?
3. **Colours:** are there 3 colours or fewer, and is every word easy to read against its background?
4. **Space:** is there empty space around the edges, or is every corner filled?
5. **Distance:** can the main message be read from where people will actually stand?

The AI is an adviser, not the boss. Sometimes its remake is worse - busier, colder, or wrong for your school. Keep the version YOU judge best, and keep your original file safe either way.

AI remakes can invent details. A regenerated poster may add a fake logo, a wrong picture or changed Urdu or English spelling. Check pictures and words before printing 30 copies for the whole school.
