One-Page Revision Sheet

Turn any chapter into a single page you can revise in 10 minutes. One copy-and-paste prompt for ChatGPT, Claude, Gemini, Muse and other AI tools - for the night before an exam and for everyday revision.

November 2026 - Free study note for students

What you get in this note: the main revision-sheet prompt, a filled example on Photosynthesis, 5 variations for different situations, and 3 follow-up prompts that turn your sheet into a quiz. Works for any subject and any class.

Why one page works so well

A full chapter is too much to revise in one sitting. One page is not. When you force everything onto a single page, only the important things survive - and those are usually the things the exam asks about.

A good one-page sheet does three jobs at once. First, it **selects**: definitions, formulas, dates and key points stay, long stories and repeated examples go. Second, it **organises**: related points sit together, so your brain remembers groups, not scattered lines. Third, it **fits your time**: you can read it fully in about 10 minutes - on the morning of the exam, on the bus, or in the last break before the paper.

> **The rule of this shortcut:** one topic, one page. If a topic is very big, make two sheets - one per half - instead of squeezing one sheet until nobody can read it.

How to use it - 4 simple steps

1. **Choose one topic.** For example: Photosynthesis, Fractions, The Mughal Empire, or Present Simple Tense. One topic only.
2. **Copy the prompt on the next page.** Replace everything in [brackets] with your topic, class and subject. If you have class notes, paste them after the prompt so AI uses your own material.
3. **Check the sheet.** Read it against your textbook. Fix any wrong date, formula or definition before you trust it - AI can make mistakes.
4. **Print it or copy it by hand.** Writing it once by hand helps memory even more. Keep all your sheets in one folder - by exam time you will own a full revision pack.

Which tool should you use?

Any chat AI works for this prompt - ChatGPT, Claude, Gemini or Muse. Use the one you already have. The prompt matters more than the tool.

The main prompt - copy and paste

Copy the whole box exactly as it is. Only change the parts in [brackets].

PROMPT - One-Page Revision Sheet **Best for: ChatGPT / Claude / Gemini / Muse**

> Act as my study teacher. Make a ONE-PAGE revision sheet on the topic [TOPIC] for [CLASS, e.g. Class 8] [SUBJECT, e.g. Science]. My exam is [EXAM TYPE, e.g. a school test / board exam]. Use only simple English that a student of my class can understand.
>
> Give the sheet in exactly these 6 parts:
> 1. MAIN IDEA - the whole topic in 2 lines.
> 2. KEY WORDS - 6 to 8 important words with a very short meaning for each.
> 3. MUST-REMEMBER POINTS - the 10 most important facts, formulas or dates, one line each. Put the most likely exam points first.
> 4. DIAGRAM IN WORDS - describe the main diagram or process step by step, so I can draw it myself.
> 5. COMMON MISTAKES - 3 mistakes students often make on this topic, and the correct version.
> 6. TEST YOURSELF - 3 short questions on this topic. Do NOT give the answers yet - I will answer first.
>
> Keep the full sheet short enough to fit on one printed page. Use headings and bullet points. Do not add long paragraphs. If I paste my class notes below, use only my notes: [PASTE YOUR NOTES HERE - or delete this line]

Tip: Adding your own notes at the end is the best upgrade. Without them, AI uses general knowledge, which may not match your textbook word for word.

How to fill the brackets - one example

Bracket	Example
[TOPIC]	Photosynthesis
[CLASS]	Class 7
[SUBJECT]	General Science
[EXAM TYPE]	Mid-term school test

> **Golden rule:** be specific. "Make a sheet on Science" gives a weak sheet. "Make a sheet on Photosynthesis for Class 7" gives a strong one.

What a good sheet looks like

This is the shape your sheet should have. The content below is a short example on Photosynthesis, so you can see the size and style to expect.

Revision Sheet - Photosynthesis (Class 7 Science)

1. MAIN IDEA

Plants make their own food using sunlight, water and carbon dioxide, and release oxygen.

2. KEY WORDS

Chlorophyll - green colour in leaves that traps sunlight. **Stomata** - tiny holes in leaves for gases. **Glucose** - the food (sugar) the plant makes.

3. MUST-REMEMBER POINTS

- Equation: carbon dioxide + water + sunlight -> glucose + oxygen.
- Photosynthesis happens in leaves, mainly in the daytime.
- What is needed: sunlight, chlorophyll, carbon dioxide and water.

4. DIAGRAM IN WORDS

Draw a leaf. Arrow in: sunlight from above, carbon dioxide from the air, water from the roots below. Arrow out: oxygen going up, glucose staying in the leaf.

5. COMMON MISTAKES

Wrong: "Plants get food from the soil." Correct: plants make food in their leaves; soil gives water and minerals only.

6. TEST YOURSELF

1. What does a plant need to make food? 2. Where does the oxygen go? 3. Why are leaves green?

Your real sheet will be a little longer than this example - about one full page. If AI gives you three pages, use the follow-up prompt on the next page: "Make it shorter."

5 variations - one for every situation

Start from the main prompt, then add or swap the line shown. You do not need a new prompt for each situation.

V1 - Last-Night Revision

> Add this line: "My exam is tomorrow morning. Keep ONLY the points most likely to come in the exam. Cut everything else, even if it is interesting."

Use when: you have one evening left and many topics to cover.

V2 - Formulas and Sums Only (Maths / Physics)

> Replace part 3 with: "List every formula in this topic, what each letter means, and one tiny example sum solved in 2 lines."

Use when: the chapter is full of formulas and you keep mixing them up.

V3 - Dates and Facts Only (History / Pakistan Studies)

> Replace part 3 with: "Make a timeline: year on the left, event in the middle, and one line on why it matters. Put the events in date order."

Use when: the topic is a story of events and the exam tests dates.

V4 - Only My Weak Points

> Add this line: "I already know the basics. Skip the easy parts. Focus only on the difficult and confusing points of this topic, and explain each one with a simple example."

Use when: you revised once already and want a harder, smarter second sheet.

V5 - Extra Simple English

> Add this line: "Use very simple English, short sentences, and give the meaning of every difficult word in brackets. Where it helps, add the Urdu meaning of the key word."

Use when: English is the hard part, not the topic itself.

Follow-ups and the 10-minute method

After your sheet is ready, these three short prompts make it work harder. Type them in the same chat, one at a time.

F1 - Make It Shorter

> "This sheet is too long for one page. Keep the same 6 parts, but cut it to half the size. Remove examples first, keep all facts, formulas and dates."

F2 - Now Quiz Me

> "Now quiz me using only this sheet. Ask one question at a time, wait for my answer, tell me if I am right, and show my score at the end."

F3 - Add Memory Tricks

> "Add one easy memory trick - a short rhyme, a funny sentence, or a first-letter trick - for the hardest list on this sheet, so I never forget the order."

The 10-minute method: Read - Cover - Recall - Check

1. **Read** the full sheet slowly once (3 minutes).
2. **Cover** it with your hand or a book.
3. **Recall:** say or write everything you remember (4 minutes).
4. **Check** against the sheet and mark what you missed in a different colour. Next time, revise the coloured parts first.

Use AI honestly. 1. Check every fact, date and formula on your sheet against your textbook or teacher - AI can be wrong. 2. A revision sheet is for learning, not for copying into an exam. 3. Never type your password, CNIC, home address, phone number or photos of other people into an AI chat. 4. Write your final answers in your own words - that is what you are marked for.

Your task today: pick the hardest topic from your current chapter, run the main prompt, check the sheet, and do one Read - Cover - Recall - Check round. One page, ten minutes, one topic truly learned.
