One-Page Website

Build one complete web page in minutes: paste one clear prompt into any AI chat, get a single ready-to-open file, check it on your phone, then publish it.

Notes by Shah Fahad

Free student notes - Websites set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Page 2 gives you the master prompt and the fix-it prompt. Page 3 walks you from prompt to a live page, step by step - no coding experience needed to start.

The master prompt - one page, one file

Build My One-Page Website

Works in: ChatGPT - Claude - Gemini - Muse

> Build me a complete one-page website as ONE single HTML file I can open in a browser. Topic: [TOPIC]. For: [WHO IT IS FOR].
> Include only these sections, in this order: 1) a big title with one short line under it, 2) About - 3 to 4 short sentences, 3) Three main points or services, each with a heading and 2 sentences, 4) One simple table or list with [DETAILS], 5) Contact section with [CONTACT - only what I write here].
> Style: [COLOUR 1] and [COLOUR 2], clean and simple, big readable text (at least 16px), works perfectly on a mobile phone, no sideways scrolling. Use only my words and facts - do not invent prices, dates, phone numbers or names. If something is missing, write [ADD HERE] so I can fill it myself. Give me the full file in one code block, with nothing cut off.

Fill the brackets: for example TOPIC = "our Class 5 science club", WHO = "students and parents", COLOURS = "dark blue and cyan", CONTACT = a school name only - never a private mobile number for a public page.

The fix-it prompt - improve without rebuilding

Fix and Improve This Page

Works in: same AI chat, same conversation

> Here is the website file you made. Keep all my words and facts exactly the same and fix only this: [WHAT TO FIX - for example "the text is too small on my phone" or "the table breaks on a small screen" or "add an Urdu heading under the title"]. Return the complete updated single HTML file, not only the changed part.

One fix at a time: ask for one change, check it, then ask for the next. Five changes in one message often break a page that was working.

> **The golden rule of one-page sites:** one page, one job. A page for a science club, a portfolio or a school event does that one job well. If you need a second job, make a second page later - do not crowd everything onto this one.

From prompt to live page, step by step

1. **Write your facts first** on paper: title, about lines, three main points, and the contact you are happy to show publicly.
2. **Paste the master prompt** into any AI chat, fill every bracket, and send it.
3. **Save the reply** exactly as given into a file named index.html.
4. **Open the file** in your browser. Read every word - check spellings, dates and numbers against your paper notes.
5. **Check it on a phone.** Text must be readable without zooming, and nothing should scroll sideways.
6. **Fix with the fix-it prompt** on page 2 - one fix at a time, and re-check after each one.
7. **Publish only when it is correct.** Use a free hosting service that lets you upload your index.html file, then open the live link and test it once more.

Worked example - the prompt, filled in

"Topic: our Class 5 science club. For: students and parents. About: we meet every Friday and do one small experiment. Three points: Fun Experiments, Plant Watch, Clean School. Table: meeting day, time and place. Contact: school name only. Style: dark blue and cyan, big readable text, perfect on mobile. Do not invent any dates or numbers."

Make it yours

Change this	What you get
Change the topic to "my student portfolio"	A personal page to show teachers, for job or course applications.
Change the topic to a school event, with date, time and place you supply	An event page you can share as a link in a class group.
Ask for the three points as "items for sale" with prices you write yourself	A simple one-page shop front - only with prices you have checked.
Add "give every heading in English and Urdu"	A bilingual page parents and students can both read.

Check every fact before you publish. AI can invent a date, price or number that looks real. Your paper notes are the authority - if a fact is not on your paper, it does not go on the page.

Keep private things private. Never put a home address, private mobile number, student photos or ID number on a public page.

More shortcuts in this set: School Website Section - Quiz Web Page - Landing Page for a Class.
