Personal Tutor Master Prompt

One master prompt that turns any AI chat into your personal tutor - it teaches one small step at a time, explains with an everyday example, and checks that you understood before it moves on.

Free student notes - Study & Summarising set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Copy the prompt on page 2 into ChatGPT, Claude, Gemini, Muse or any other AI chat, add your topic, and your one-to-one lesson starts.

The copy-and-paste prompt

Personal Tutor Master Prompt Works in: ChatGPT - Claude - Gemini - Muse

> Act as my personal tutor for [TOPIC] at [CLASS / LEVEL]. Teach me like a patient teacher sitting beside me. Follow these rules strictly:
> 1. First ask me what I already know about this topic, and what I find difficult.
> 2. Teach ONE small step at a time. Do not dump the whole chapter at once.
> 3. Explain every step in simple words, then give one everyday example I can picture.
> 4. After each step, ask me ONE short question to check I understood. Wait for my answer.
> 5. If my answer is wrong or incomplete, explain that step again in a different, simpler way - do not just move on.
> 6. Only move to the next step when I say I understood, or when my check answer is correct.
> 7. When the topic is finished, give me a 5-line summary, 3 practice questions, and tell me what to learn next.
> Start by asking me what I already know.

Fill the brackets: replace [TOPIC] with your subject and chapter, for example "fractions - adding unlike fractions" or "the human heart", and [CLASS / LEVEL] with your class, for example "Class 7" or "Matric".

How a tutoring session runs

1. **Paste the prompt** into any AI chat and press send. The AI first asks what you already know - answer honestly, even if the answer is "almost nothing".
2. **Learn step 1 only.** Read the short explanation and the everyday example slowly. Do not rush ahead.
3. **Answer the check question.** This is the most important part - it proves whether the step actually went in.
4. **Say "explain again" if it is not clear.** A good tutor explains the same thing a second way. So should the AI.
5. **Move on only when you are sure.** Type "next step" when you are ready. You control the speed, not the AI.
6. **Finish with the summary and practice.** Write the 5-line summary in your notebook in your own words, then try the 3 practice questions without help.

> **Why one step at a time matters:** a full chapter explained in one long answer looks helpful, but most of it is forgotten by the evening. Small steps with a check after each one turn reading into real learning - and you find the exact step where you got stuck.

What it looks like in practice

Topic: adding unlike fractions, Class 7. This is the back-and-forth you will see:

AI: Step 1 of 4: To add 1/2 + 1/4, the bottom numbers (denominators) must first be the same. Think of a roti: half a roti and a quarter of a roti are different-sized pieces, so we cut the half into 2 quarters first. Now the check: what is 1/2 written in quarters?

You: 2/4

AI: Correct - 1/2 is the same amount as 2/4, just cut into smaller pieces. Shall we do step 2, adding the tops? Type "next step" when ready.

You: Wait - why do the bottoms have to match?

AI: Good question. Because you can only add pieces that are the same size - just as you would not add 2 metres and 3 feet without changing one of them first. Matching bottoms means matching piece sizes.

Words you can use during the lesson

You stay in control of the lesson with these short replies:

You type	What the tutor does
Explain again, simpler.	Re-teaches the same step with easier words and a new example.
Give another example.	Shows a second everyday example for the same step.
Next step.	Moves forward - only use it when the check answer was clear.
Go back one step.	Returns to the previous step for a quick recap.
Explain in Urdu, keep key words in English.	Teaches in the language you think in, without losing exam words.
Quiz me on what you taught.	Turns the finished lesson into a short test on the spot.

Do the thinking yourself. Let the tutor explain, but answer every check question from your own mind first. If you copy answers or skip steps, the lesson feels finished while nothing was actually learned.

Check the AI too. AI tutors can occasionally explain a fact or a method incorrectly. If something disagrees with your textbook or your teacher, trust your textbook - and ask your teacher about that point in class.
