Quiz Web Page

One copy-and-paste prompt that turns any AI chat into a web-page builder - it writes you a complete interactive quiz page on any topic, with a timer, instant right-or-wrong feedback, a final score and a Play Again button.

Free student notes - Websites set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Copy the prompt on page 2 into ChatGPT, Claude, Gemini, Muse or any other AI chat, add your topic, and you get one ready-to-open quiz page for your phone or computer.

The copy-and-paste prompt

Quiz Web Page Works in: ChatGPT - Claude - Gemini - Muse

> Build me a complete interactive quiz web page on [TOPIC] for [CLASS / EXAM LEVEL]. Give me ONE single HTML file with everything inside it - HTML, CSS and JavaScript together - so I can save it and open it in any browser with no internet and no extra files. Follow these rules strictly:
> 1. Include 10 multiple-choice questions, each with 4 options and only one correct answer.
> 2. Show one question at a time, with a progress bar showing Question 1 of 10, 2 of 10, and so on.
> 3. When I click an answer, colour it green if correct and red if wrong, show the correct answer, and give a one-line explanation before I move on.
> 4. Add a 30-second timer for each question. When time ends, mark it wrong and show the correct answer.
> 5. At the end, show my score out of 10, a short message for my level, a list of the questions I got wrong with the correct answers, and a Play Again button.
> 6. Make it mobile-friendly, with big readable text and big tap buttons, in a clean navy and white design.
> 7. Do not use any external links, images or libraries - everything must work offline in the one file.
> Give me the full code in one block, ready to copy.

Fill the brackets: replace [TOPIC] with your subject and chapter, for example "photosynthesis" or "fractions", and [CLASS / EXAM LEVEL] with your class, for example "Class 8" or "Matric".

How to use the page you get

1. **Copy the whole code block** the AI gives you - from the first line to the last line, nothing missed.
2. **Save it as a file** named quiz.html. On a computer, paste it into Notepad and save with that name. On a phone, use any free HTML editor app, or ask the AI chat to guide you step by step.
3. **Open quiz.html in your browser.** The quiz starts at once - no sign-up, no internet needed after saving.
4. **Play it honestly, from memory.** Read the explanation after every question, right or wrong.
5. **Share the one file.** Send quiz.html to classmates on WhatsApp or copy it to other phones - the same file works everywhere.

> **Why one file matters:** a quiz split into separate code, style and script files breaks the moment one part is lost. One single file can be saved, shared and reopened months later, exactly as it was made.

What it looks like in practice

Topic: photosynthesis, Class 8. This is what the finished page shows, screen by screen:

Start screen: Photosynthesis Quiz - Class 8 - 10 questions - Start Quiz button.

Question screen: Question 3 of 10 - Time left: 24 seconds - Which gas do green plants take in from the air for photosynthesis? A) Oxygen B) Nitrogen C) Carbon dioxide D) Hydrogen

After you tap C: Correct - shown in green. Plants take in carbon dioxide and use it, with water and sunlight, to make their food. Next button appears.

Result screen: You scored 8 out of 10 - Very good. Questions you missed are listed with the correct answers, and a Play Again button restarts the quiz.

Make it yours - level, language and look

Add one of these short lines under the main prompt to change the page:

Add this line	What changes
Make 20 questions and remove the timer.	A longer practice set you can take at your own pace.
Write the questions in Urdu, but keep the science words in English.	Helps if you think in Urdu but write exams in English.
Make the questions harder, with one tricky question in every five.	For toppers and final revision before a test.
Use a green and white design and add my name, [YOUR NAME], at the top.	A page that looks like your own class quiz.
At the end, also show which chapter points I should revise again.	Turns your score into a clear next study step.

Check the answer key first. Before you share the page, play it once yourself and check every correct answer against your textbook. An AI can occasionally mark a wrong option as correct, and a shared page would teach that mistake to the whole class.

Use it honestly. The timer and score only help if every answer came from your own memory. Opening your book mid-quiz gives you a score that lies to you.
