Same Character Every Time

The AI picture shortcut for stories, comics and videos: write your character once, save the description, and paste it word-for-word into every new picture - so the hero of scene 1 is still the hero of scene 10.

Free student notes - Pictures & Video set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. It gives you a character block to fill in once, plus three copy-and-paste prompts for ChatGPT Images, Gemini, Muse and Google Flow.

First, write your character block

An AI image tool has no memory of your last picture unless you give it one. The character block is that memory: a short, fixed description you paste into every prompt, unchanged. Fill it in once, save it in your phone notes, and never rewrite it from memory.

My character block **Fill once - reuse forever**

> CHARACTER: Zara, a 10-year-old Pakistani girl with long black hair in two braids, brown eyes, and a small smile. She wears a blue school uniform, white dupatta, and red school bag. Same face, same hairstyle, same clothes in every picture. Friendly cartoon style for children, bright colours, clean lines.

What to include: name, age, face, hair, one outfit, one special item (bag, cap, glasses), and the picture style. Leave out anything you are happy to change later.

> **The golden rule:** change only the scene, never the character block. If Zara is "10 years old with two braids" in scene 1, those exact words must appear in scene 2, scene 3 and scene 4. Even a small change - "ponytail" instead of "braids" - makes a different girl.

Three things that lock the character

1. **The block, word-for-word.** Copy and paste it. Do not type it again in new words.
2. **A reference picture.** Where the tool allows an upload, attach your best first picture of the character with every new prompt and say "use this same character".
3. **One style line.** End every prompt with the same style words, for example "friendly cartoon style for children, bright colours" - a new style makes the same character look like a stranger.

The copy-and-paste prompts

Prompt 1 - Create the character

Works in: ChatGPT - Gemini - Muse

> Create a picture of this character, standing, full body, plain white background, so I can use it as my reference picture:
> [PASTE YOUR CHARACTER BLOCK HERE]

Tip: save this first picture carefully. It is your master copy, and every later scene starts from it.

Prompt 2 - Same character, new scene

Works in: ChatGPT - Gemini - Muse

> Use the exact same character from the attached picture. Do not change her face, hairstyle, clothes or age.
> [PASTE YOUR CHARACTER BLOCK HERE]
> New scene: [DESCRIBE THE SCENE - for example: Zara is reading a book under a mango tree in her village, morning light].
> Keep the same picture style as the reference picture.

Fill the brackets: only the scene changes. The block and the style line stay exactly the same.

Prompt 3 - Turn the picture into video

Best for: Google Flow

> Animate this picture. Keep the same character exactly as she is - same face, same clothes, no change. She [ONE SIMPLE MOVEMENT - for example: waves her hand and smiles]. Camera stays still. 5 seconds, gentle and natural movement.

Tip: ask for one simple movement only. Big movements are where faces and clothes change most.

Step by step: a four-scene story

1. **Write the block** and save it in your phone notes or a document you will not lose.
2. **Make the reference picture** with Prompt 1. If the face is not right, fix it now, not later.
3. **Make scene 1** with Prompt 2 and your first scene description.
4. **Repeat for scenes 2, 3 and 4,** pasting the same block and attaching the same reference picture each time.
5. **Check each picture before moving on:** same face, same hair, same clothes, same style. If one scene drifts, remake that scene - do not accept it and continue.
6. **For video,** send each finished picture to Google Flow with Prompt 3, one scene at a time.

When the character changes anyway

Problem	Fix
The face looks different	Attach the reference picture, add "same face as the reference picture", and shorten the scene description.
The clothes change colour	Name the colours inside the block itself, for example "blue uniform", and repeat them in every prompt.
The character looks older or younger	Keep the exact age words in the block, for example "10-year-old", in every single prompt.
The style changes	Use the identical style line at the end of every prompt, and stay in the same tool for the whole story.
A second character mixes faces	Give each character its own block and its own name, and describe them one at a time in the scene.

Use invented characters for stories. This shortcut is for characters you create - a story hero, a class mascot, a cartoon teacher. Never copy a real person's face into new pictures or videos without that person's clear permission.

Expect small differences. Even with a perfect block, AI pictures are not photographs of a real person, so tiny details can shift. The block, the reference picture, and checking scene by scene keep those shifts small.
