AI NOTES SERIES - PROMPT SHORTCUTS

School Website Section

Copy-and-paste AI prompts that write and build one section of a school website at a time - About, Head Teacher Welcome, Staff, Admissions, Notice Board, Gallery and Contact. For ChatGPT, Claude, Gemini, Muse and other AI tools.

November 2026

This is one shortcut from a series of separate student notes - one topic per PDF. Copy a prompt, replace the words inside [square brackets] with your own school's real facts, and paste it into any AI tool. Build the website section by section, and check every name, date and number before anything goes public.

One Section at a Time - Each Answers One Question

A school website is not one long page of writing. It is a set of small sections, and each section exists because a parent, student or visitor arrives with one question. Ask the AI for the whole website in one prompt and you get vague, mixed-up text. Ask for one section at a time and each answer stays clear.

Section	The question it answers
About Our School	What is this school, where is it, and since when?
Head Teacher Welcome	Who leads this school and what does it stand for?
Our Staff	Who teaches here?
Admissions	How do I admit my child, and what should I bring?
Notice Board	What is new - holidays, exams, events, results?
Gallery	What does school life look like here?
Contact	How do I reach the school, and when is it open?

How to use this shortcut - three steps

1. **Pick one section** from the table above - only one.
2. **Gather the real facts first** - names, classes, dates, timings and documents - from the school record, not from memory.
3. **Copy the matching prompt** in this note, replace the [square brackets] with those facts, and paste it into your AI tool.

> **The one rule that makes school websites true:** the AI writes the sentences, but the facts must come from you. Tell it clearly in every prompt: "Use only the facts I give you. Do not invent names, dates, fees, numbers of students or phone numbers." A school website is a public record - an invented fact on it is a real problem, not a small mistake.

The Master Prompt - Any Section, One at a Time

This one prompt builds any single section. Change the section name and the facts, and reuse it for the whole website.

1. Build one school website section - the master prompt

Best for: ChatGPT, Claude, Gemini, Muse

> You are helping me build the website of [school name], a [primary / middle / high] school in [village/town, district]. Write the [About Our School] section of the website. Use ONLY these real facts: [paste the facts - year started, classes offered, number of students and teachers, facilities]. Write a short heading, then 2 short paragraphs in simple, warm English that a parent can understand. Add 4 bullet points of key facts at the end. Do not invent any name, date, number or facility that is not in my facts. If a fact is missing, write [to be added] instead of guessing.

Tip: Run this prompt once per section. Seven careful sections beat one rushed whole-website prompt every time.

Ask for the web code as well, when you need it

Writing tools like ChatGPT, Claude, Gemini and Muse can also give you the section as ready web code. Add this line to the master prompt:

> "Now give me this same section as clean HTML code with inline CSS, in navy blue and white, that looks correct on a mobile phone. Keep my text exactly as approved - change only the design, not one word."

Tip: Approve the words first, then ask for the code. If you ask for words and code together, you end up editing both at once and mistakes slip through.

Make the section bilingual

Many parents read Urdu more easily than English. Add one line: **"Also give an Urdu translation below the English, in simple words a parent would use."** Keep the English first, and check the Urdu yourself before publishing - translation is where AI errors hide.

About, Welcome and Staff - the Trust Sections

These three sections decide whether a parent trusts the school. They carry real names, so feed the prompts exact facts and check them twice.

2. About Our School

Best for: The school's main page

> Write the 'About Our School' section for [school name] in [place]. Facts: started in [year]; classes from [Class 1] to [Class 5]; [number] students and [number] teachers; facilities: [playground, library, computer lab - list only what truly exists]. Structure: one welcoming line, a short history in 3 lines, what the school offers in 4 bullets, and one line on its mission. Simple English, warm tone, no invented facts.

Tip: A mission line you write yourself is worth more than a grand one the AI invents. Give it your own words in the facts.

3. Head Teacher Welcome Message

Best for: The head teacher's photo page

> Write a welcome message of about 120 words for the website of [school name], in the voice of the head teacher, [name]. Points to include: every child can learn; parents are partners in education; the school keeps a safe, respectful environment; visitors are welcome during school hours. Warm and dignified tone, simple English. Do not add achievements, awards or results that I have not given you.

Tip: Read the message aloud before publishing. If it does not sound like the head teacher speaking, ask the AI to make it simpler and shorter.

4. Our Staff Section

Best for: Staff list page

> Turn this staff list into a neat 'Our Staff' website section. For each teacher give: name, post, qualification, and one short line about their subject or class. Keep the order I give you, keep every spelling of every name exactly as written, and do not add any person or qualification. Here is the list: [paste name, post, qualification for each staff member].

Tip: Names are the highest-risk text on a school website. Check every spelling against the school record, name by name, before this section goes live.

Admissions, Notices, Gallery and Contact

These sections change often, so keep the prompts. Each new term, you only replace the facts and run the same prompt again.

5. Admissions Section

Best for: Start of the school year

> Write an 'Admissions Open' section for [school name]. Facts: admissions open from [date] to [date]; classes: [list]; documents parents must bring: [B-Form copy, parent CNIC copy, previous school certificate - list the real ones]; school office timing: [timing]. Structure: a clear heading, admission steps numbered 1 to 4, a documents checklist, and one line telling parents whom to contact. Do not mention any fee unless I give you the amount.

Tip: Dates and documents are facts parents act on. Confirm them with the school office on the day you publish, not from last year's notice.

6. Notice Board Item

Best for: Every announcement

> Turn this information into a short website notice: [paste the raw information]. Give it: a clear title of under 8 words, the date in the first line, the main point in 2 lines, and what parents or students must do, in 1 line. Simple English, then a one-line Urdu version. Do not change any date, time or name in my information.

Tip: One notice, one subject. Two announcements in one notice means half the parents miss the second one.

7. Gallery Captions

Best for: Photo sections

> Write a short caption of one line for each of these school photos: [describe each photo, for example: students planting trees, morning assembly, science activity in Class 5]. Keep the captions warm and factual, name the activity and the class, and do not name any child. Number the captions in the same order as my list.

Tip: Never let a caption name a child or guess an event. If you are not sure what a photo shows, leave that caption out.

8. Contact Section

Best for: Footer of every page

> Write a 'Contact Us' section for [school name] using only these details: address: [full address]; phone: [number the school has approved for public use]; school hours: [timing]; office visiting hours for parents: [timing]. Format it as a small table, then add one sentence telling parents the best time to visit. Do not add an email address, map link or social media link that I have not given you.

Tip: Publish only a phone number the school has agreed to make public. A teacher's private number does not belong on a website.

A Worked Example - and the Final Check

Here is the About prompt filled in for a sample school, and the kind of section that comes back. The school in this example is imaginary - copy the method, not the facts.

The prompt used: "Write the 'About Our School' section for Green Valley Primary School in Swat. Facts: started in 1998; classes from Class 1 to Class 5; 180 students and 8 teachers; facilities: playground and a small library. Structure: one welcoming line, a short history in 3 lines, what the school offers in 4 bullets, and one line on its mission. Simple English, warm tone, no invented facts."

The kind of section that comes back: a welcoming heading, a short history that stays within the facts given, four bullets drawn only from the facilities listed, and a closing mission line. Nothing about exam results, awards or buildings appears - because none of it was in the facts.

Before any section goes public - check these five

1. Every **name and spelling** matches the school record.
2. Every **date, timing and number** is current, not last year's.
3. No **invented fact** slipped in - no award, result or facility the school does not have.
4. The section shows **no child's full name** and no teacher's private phone number.
5. A second person - the head teacher or a colleague - has **read it once** with fresh eyes.

Use AI honestly. These prompts help you write and build a school website faster. They do not replace the school record. If the AI and the record disagree, the record is right - fix the prompt's facts and run it again.

Build the site section by section, publish only what you have checked, and update the changing sections - admissions and notices - on the day the facts change.
