Translate Urdu and English

One copy-and-paste AI prompt that translates between Urdu and English the right way - keeping the meaning, matching your class level, and teaching you the difficult words in both languages. For ChatGPT, Claude, Gemini, Muse and other AI tools.

By Shah Fahad

November 2026

This is one shortcut from a series of separate student notes - one topic per PDF. Copy the prompt, replace the words inside [square brackets] with your own text and class, and paste it into any AI tool. Translation helps you understand and learn both languages. The checking and the final writing stay with you.

Good Translation Keeps Meaning, Not Word Order

Urdu and English do not build sentences the same way. In Urdu the verb usually comes at the end of the sentence, and one Urdu word can carry a respect or feeling that needs two or three English words. A word-by-word translation often sounds wrong in both languages. A good translation keeps the meaning, the tone and the level - and that is what these prompts ask for.

A good translation does this	A weak translation does this
Keeps the full meaning, even when the word order must change	Changes each word one by one and keeps the wrong order
Matches your level - simple for a child, formal for a letter	Uses bookish or difficult words you cannot understand
Keeps names, dates, numbers and places exactly the same	Changes, drops or guesses names and numbers
Explains difficult words so you learn while you read	Gives only the translation, so you learn nothing new

How to use this shortcut - three steps

1. **Copy** the master prompt on the next page exactly as written.
2. **Choose the direction** - Urdu to English, or English to Urdu - and replace the words inside [square brackets] with your class and your own text.
3. **Check the result** - read names, dates and numbers character by character, and learn the difficult words listed at the end.

> **The one rule that makes translation work:** always paste your own text. Paste the exact paragraph from your book, letter or essay. If you only name a topic, the AI will invent its own text first and then translate that - which is not your homework, your book or your words.

Which tool should you use?

Any chat AI works: **ChatGPT, Claude, Gemini or Muse**. Gemini and ChatGPT are strong with Urdu script. Always check that Urdu comes back in proper Urdu script, not only in Roman Urdu, unless Roman Urdu is what you asked for - there is a variant for that on page 5.

The Master Prompt

Copy this prompt, fill in the brackets, paste your text at the end, and send. It gives you the translation plus the learning - not just converted words.

1. Translate Urdu and English - the master prompt

Best for: ChatGPT, Claude, Gemini, Muse

> You are my language teacher. Translate the text below from [Urdu to English / English to Urdu] for a Class [8] student. Rules: 1) Keep the full meaning, do not translate word by word. 2) Use simple, natural language at my class level. 3) Keep all names, dates, numbers and places exactly the same. 4) After the translation, list any difficult words with their meaning in the other language. 5) If any sentence can be translated in two ways, give the better one and say why in one short line. Here is my text: [paste your text]

Tip: Use this one prompt for almost everything. Only the direction, the class and your text change - the five rules stay the same all year.

Why this prompt works

- **It gives a direction and a level.** "Urdu to English, for a Class 8 student" stops translations that are too hard, too formal or in the wrong language.
- **It protects the facts.** Names, dates and numbers must never change in translation. Rule 3 makes the AI careful with them - and you still check them yourself.
- **It turns translation into learning.** The difficult-words list at the end is the real prize: five minutes with that list teaches more than the translation alone.
- **It shows its choices.** When two translations are possible, rule 5 teaches you which one a teacher would choose, and why.

> **Make it yours in ten seconds:** change the direction, change the class, paste your text. If you translate every day, save the filled prompt in your phone notes so you never type it again.

Six Variants for Six Real Jobs

The master prompt handles most work. These variants are built for the jobs students in Pakistan actually face every week.

2. Textbook English to easy Urdu - understand the lesson first

Best for: Gemini, ChatGPT, Claude

> Translate this textbook paragraph into very simple Urdu that a Class [6] student can understand easily. Keep the important English science words in brackets after their Urdu meaning, so I learn the English terms too. Go sentence by sentence, in the same order. Text: [paste your textbook paragraph]

Tip: Understanding in Urdu first, then reading the English again, is one of the strongest study methods for students who think in Urdu.

3. My Urdu essay to correct English - for exams and homework

Best for: ChatGPT, Claude, Gemini

> Translate my Urdu essay into correct, natural English suitable for a Class [10] exam. Keep my ideas and my order exactly - do not add new points. Use clear sentences, not very difficult words. After the translation, list 3 English words or phrases from it that I should learn. My Urdu essay: [paste your Urdu essay]

Tip: Your ideas stay yours. The AI only changes the language - if it adds a point you never wrote, delete that sentence.

4. Formal translation - letters, applications and notices

Best for: Claude, ChatGPT, Gemini

> Translate this [application / letter / notice] from [Urdu to English / English to Urdu] in a formal, respectful style suitable for a school or government office. Keep the format, the dates, names, class, roll number and school name exactly the same. Do not shorten anything. Text: [paste your letter or application]

Tip: Always re-check every name, date and number in a formal translation yourself before you print or submit it.

Six Variants (continued)

5. Word-by-word learning mode - see how the sentence is built

Best for: ChatGPT, Claude, Gemini

> Teach me this sentence in learning mode. Sentence: [paste one sentence]. Give me: 1) the full natural translation, 2) a word-by-word table with each word, its meaning in the other language, and its type (noun, verb, adjective), 3) one new simple sentence using the most important word, so I can practise it.

Tip: Use learning mode on one difficult sentence at a time, not on a whole page. It is slow on purpose - that slowness is the learning.

6. Simple translation for a young child

Best for: Gemini, ChatGPT, Claude

> Translate this text into [very simple Urdu / very simple English] for a young child of about [7] years. Use very short sentences and easy everyday words. Keep it kind and clear. If a word is too hard for a child, replace it with an easier word with the same meaning. Text: [paste your text]

Tip: Best for reading stories and instructions to younger brothers, sisters and primary classes.

7. Roman Urdu help - when you cannot type Urdu script

Best for: ChatGPT, Gemini, Claude

> I will write in Roman Urdu. First write my text in proper Urdu script, then translate it into simple English. Then translate your English back into proper Urdu script so I can compare. Keep names and numbers exactly the same. My Roman Urdu text: [type your text in Roman Urdu, for example: mujhe kal school jana hai]

Tip: Many students type Roman Urdu on a phone. This variant turns it into proper Urdu script you can copy into homework and letters.

A Worked Example - Both Directions

The English paragraph below was translated with variant 2, and the Urdu paragraph with the master prompt. Notice what stays identical: the meaning, the order, and every name and number.

English original: Our school library has 450 books. Students of Class 5 visit the library every Friday. Reading books improves our vocabulary and helps us write better essays.

Urdu translation:

ہمارے اسکول کی لائبریری میں 450 کتابیں ہیں۔ پانچویں جماعت کے طلبہ ہر جمعہ کو لائبریری جاتے ہیں۔ کتابیں پڑھنے سے ہمارے ذخیرہ الفاظ میں بہتری آتی ہے اور ہمیں بہتر مضامین لکھنے میں مدد ملتی ہے۔

Difficult words: library - لائبریری / کتب خانہ ; vocabulary - ذخیرہ الفاظ ; improves - بہتر بناتا ہے

Your practice - ten minutes

1. Pick one paragraph from your English book. Translate it into Urdu with variant 2, then close the book and translate your Urdu back into English yourself.
2. Compare your English with the book. Circle every difference and decide which version is correct - and why.
3. Write the five hardest words, with meanings in both languages, in your notebook. Test yourself on them tomorrow.

Honest use: translation is for understanding and learning. In an exam or a test, translate with your own mind - that is what is being marked. Never submit an AI translation as your own language work without checking it, learning from it, and being able to explain every line.

Also check machine translations with care: an AI can choose the wrong meaning for a word that has two meanings, and can sound confident while doing it. If a translated sentence changes the meaning of your book, your book wins - ask your teacher.
