Turn Notes into a Memory Story

Dry facts are hard to remember. A story is not. This one prompt turns any set of notes into a short adventure - with every fact in the right order - so you can recall it in the exam hall.

Why a story sticks

Your brain is built for stories. When facts arrive as a list, you must hold each one on its own. When the same facts arrive as a journey, each one pulls the next one with it:

- **Order is built in.** A story happens step by step, so processes and timelines stay in sequence.
- **Characters give facts a face.** A water drop, a king, or a travelling coin is easier to picture than a definition.
- **Cause and effect do the linking.** "Because this happened, that happened next" is exactly how exam answers are written.
- **Picture-hooks work.** A strange, funny scene at each step acts like a peg you hang the fact on.

Use it for

Best for

- Science processes (water cycle, digestion, photosynthesis)
- History timelines and causes of events
- Geography cycles and journeys
- Any list of steps in the right order

Not for

- Formulas and spellings - learn those by practice
- Exact definitions the examiner wants word for word
- Long chapters in one go - split them into parts first

The prompt - copy, paste, add your notes

Works in ChatGPT, Claude, Gemini, Copilot and other AI chat tools. Paste the prompt, then paste your notes underneath it.

Turn my notes below into a **short memory story** for a student.

Rules:
1. Use **every fact** from my notes, in the **same order**. Do not add new facts.
2. Give the main thing in my notes a character name and a clear journey or goal.
3. Make each step of the journey stand for one fact, with a vivid picture I can imagine.
4. Keep it under **250 words**, in simple English.
5. After the story, add a **Fact Check list**: each story scene in one line, matched to the fact it stands for.
6. End with **3 quick questions** to test me on the story.

My notes:

Worked example: the water cycle

Notes you paste in

The sun heats water in seas and lakes. Water rises as vapour (evaporation). High up, vapour cools and forms clouds (condensation). Water falls as rain or snow (precipitation). Rain collects in rivers and seas (collection), and the cycle starts again.

Story you get back

Droplet Dina's Big Round Trip. Dina the droplet lived in a warm sea. One morning the Sun King tapped her shoulder and she felt so light that she floated up into the sky - she had become invisible vapour. Higher and higher she rose, until the cold air made her shiver and huddle together with thousands of other droplets; together they became a soft white cloud. Soon the cloud grew too heavy and crowded, and Dina slipped out and fell, laughing, as rain. She landed in a rushing river, which carried her all the way home to the sea - where she rested, waiting for the Sun King to tap her shoulder again.

Story scene	Fact it stands for
Sun King taps Dina, she floats up	Evaporation
Droplets huddle in the cold into a cloud	Condensation
Dina falls as rain	Precipitation
River carries her back to the sea	Collection - cycle repeats

In the exam, walk Dina's journey in your head - each scene hands you the next fact.

Make it yours: easy variations

You want	Add this line to the prompt
A story for a younger student	"Write it for a 10-year-old, with very simple words."
A funnier, stickier story	"Make each scene a little funny or surprising, so it is hard to forget."
A story in your language	"Write the story in Urdu, but keep the Fact Check list in English."
A longer chapter	"Tell it as a 3-chapter journey, one chapter per part of my notes."
A history timeline	"Make the character travel through time, and name the year at each stop."
Exam recall practice	"Now hide the story and ask me to retell the facts in order."

Useful follow-up prompts

- **"Quiz me on the story."** - Ask for one question at a time, and wait for my answer.
- **"Make a one-line summary of each scene."** - Gives you a 10-second revision card.
- **"I forgot the middle. Tell only the middle scenes again."** - Repairs the weak link instead of re-reading everything.
- **"Turn the Fact Check list into flashcards."** - Scene on the front, fact on the back.

The 10-second template

> Make a memory story from these notes: every fact, same order, one character on a journey, under 250 words, then a Fact Check list matching each scene to its fact. Notes: [PASTE NOTES]

Learn honestly

> **The story is a memory aid, not the answer itself.** Always check the story against your real notes or textbook - AI can change or drop a fact. In exams, write the facts, not the story. And never paste a classmate's private work or personal information into any AI tool.

Your 3-step routine

- **1. Story it** the day you learn the topic.
- **2. Retell it** from memory the next day, then check the Fact Check list.
- **3. Walk the journey** once more the night before the test.
