Urdu Voiceover Video

One copy-and-paste prompt that writes a short, clear Urdu script for a voiceover video - timed scene by scene, in simple spoken words, ready to paste into a voice tool or read aloud yourself.

Free student notes - Video set

What this note is: a single shortcut, on its own, so you can save it, print it and use it in seconds. Copy the prompt on page 2 into ChatGPT, Claude, Gemini, Muse or any other AI chat, add your topic and length, and you get a voiceover script you can turn into audio in minutes.

The copy-and-paste prompt

Urdu Voiceover Script Works in: ChatGPT - Claude - Gemini - Muse

> Write an Urdu voiceover script about [TOPIC] for a [LENGTH, e.g. 60-second] video for [AUDIENCE, e.g. Class 6 students]. Follow these rules strictly:
> 1. Write in Roman Urdu OR Urdu script - use the one I name; if I name neither, use Urdu script.
> 2. Use simple, spoken words - the way a friendly teacher talks, not book language.
> 3. Keep every sentence short - one idea per sentence, so a voice tool reads it clearly.
> 4. Split the script into scenes. For each scene give: scene number, time (e.g. 0:00-0:10), the exact Urdu line to speak, and one line describing what to show on screen.
> 5. Start with a strong first line that makes the viewer keep watching.
> 6. Write numbers and years in words, not digits, so the voice reads them correctly.
> 7. End with one clear closing line and a simple call to action, e.g. like, share or revise the topic.
> 8. Also give me: a short video title in Urdu and English, and 5 keywords for the description.
> Write the full script now, scene by scene.

Fill the brackets: replace [TOPIC] with your subject, for example "the water cycle" or "parts of a plant", [LENGTH] with 30 seconds, 60 seconds or 2 minutes, and [AUDIENCE] with the class or viewer, for example "primary students".

How to turn the script into a voice

1. **Paste the prompt and check the script.** Read every line yourself first. Fix any wrong fact, hard word or very long sentence before you make audio.
2. **Choose how the voice is made.** Either record your own voice reading the script, or paste it into a text-to-speech tool that supports Urdu and pick a clear, natural voice.
3. **Paste scene by scene, not all at once.** One scene per audio clip keeps the timing right and makes mistakes easy to fix.
4. **Listen to every clip.** If a word is mispronounced, respell it the way it sounds, add a comma for a pause, or split the sentence - then generate that clip again.
5. **Put it together.** Place each audio clip under its picture or video scene in your editor, add the on-screen text from the script, and keep background music low under the voice.
6. **Watch the full video once before sharing.** Check that voice, pictures and text match in every scene.

> **Why short sentences matter:** AI voices read Urdu best in short, simple lines. One long sentence with many commas is where the voice speeds up, swallows words or reads a number wrong - splitting the line fixes most voice mistakes before they happen.

What it looks like in practice

Topic: the water cycle, 60-second video, Class 6 - shown in Roman Urdu so every student can read it:

Scene 1 (0:00-0:08) - On screen: sun shining over a lake.
Line: Kya aap jante hain, jo pani aap peete hain, woh hamesha se yahin tha?

Scene 2 (0:08-0:22) - On screen: water vapour rising.
Line: Sooraj ki garmi se jheel aur samandar ka pani bhaap ban kar hawa mein urh jata hai.

Scene 3 (0:22-0:38) - On screen: clouds forming, then rain.
Line: Upar ja kar yeh bhaap thandi hoti hai, badal banti hai, aur phir barish ban kar wapas zameen par girti hai.

Scene 4 (0:38-0:60) - On screen: rain filling a river, cycle arrows.
Line: Yehi chakkar baar baar chalta rehta hai - isay hi pani ka chakkar, yani water cycle, kehte hain.

Change the voice, length or audience

Add one of these short lines under the main prompt to change the script:

Add this line	What changes
Write it in Roman Urdu, not Urdu script.	Easier to paste into voice tools, and easier for young students to read.
Make it a 30-second script with only 4 scenes.	A short video or status-style clip on one small point.
Use a story style - start with a small story, then explain.	Holds attention for primary classes and younger viewers.
Keep the science words in English, everything else in Urdu.	Matches how the topic is written in the textbook and exam.
Also write the same script in English below the Urdu.	Useful for subtitles, or an English version later.

Check before you publish. Listen to the whole voiceover once. Urdu voice tools often misread digits, English words and names - that is why the prompt writes numbers in words. If one word still sounds wrong, respell it and remake only that scene.

Keep the facts yours. An AI script can state a fact wrongly with full confidence. Check dates, definitions and numbers against your textbook before recording - a shared mistake carries your name, not the AI's.
